| A new program will be established for repair of concrete road panels on arterial and collector roads throughout the City. These repairs are too large in scope to be considered a minor repair and are not full road rehabilitations, but significant funding is required to undertake these types of repairs. The City has 180 lane km's of concrete arterial and collector roadways (including Riverside Dr.). Many of the required panel repairs are needed to extend them through their life cycle and prevent them from requiring total reconstruction earlier than planned. |                      |                                  |                  |                                     |   |             |             |                             |             |             |             |              |                  |                   |

| The City has approximately 1668 km's of curb and gutter on roadways. Many sections have been damaged or have reached their service life and require replacement. A new program has been established to allocate funding toward curb and gutter rehabilitation throughout the City. These repairs are too large in scope to be considered a minor concrete repair and are not full road rehabilitations but do require significant funding to maintain. |                      |                                  |                  |                                  |                                 |             |             |             |                             |             |             |              |                  |                   |

| During the 2017 flood, the City of Windsor was forced to rent property to temporarily store flood material until it could be hauled to landfill. This was done at a significant cost, and was less than ideal for nearby residents. The property used in 2017 is no longer available should another event occur requiring the same kind of temporary storage. This issue proposes to develop a section of City owned vacant land approximately 155m x 50m, adjacent to the Public Drop Off. The cost of development is estimated at \$790,000 and includes clearing, excavating, asphalt, ditching, drainage and other miscellaneous items. |                      |                                  |                  |                                   |   |             |             |                             |             |             |             |                  |                   |  |

| During the 2017 flood clean up, roll-off waste containers were needed to collect and remove flood damaged waste. However, the containers were difficult to obtain as many residents/businesses were also renting them. This issue recommends purchasing 6 containers of varying sizes for use during any future disaster clean up and/or Corporate project. The cost is estimated at \$30,000. |                      |                                  |                  |                                  |  |   |             |             |                             |             |             |             |                  |                   |

| As reported to Council during January 15, 2018 Council meeting (C 218/2017 Waste-Free Ontario Act), the MOECC was proposing a ban on food and organic waste from landfill by the year 2022. As of April 30th, 2018, the MOECC released the finalized Framework for Ontario's Food and Organic Waste. The result is that the City of Windsor, due to its population and density, will be required to provide curbside collection of food waste. This would be in addition to the existing yard waste collection. Furthermore, the Framework sets a target that the City of Windsor achieves "70% waste reduction and resource recovery of food and organic waste generated by single-family dwellings in urban settlement areas by 2025". The City of Windsor is the only municipality in Essex County that would be required to provide curbside collection of food/kitchen waste, although other municipalities will be required to provide some form of collection (i.e. depot, subsidized composters), in their urban areas only, and some municipalities will have no requirements whatsoever. |                      |                                  |                  | At its meeting of August 27, 2018, Council directed Administration to engage a Consultant for the purpose of reviewing and analyzing the various methods of food and organic waste collection and treatment specific to the City of Windsor. The maximum cost approved for this study is \$85,000 to be funded from unallocated / available PYG dollars in 2021 (\$65,000) and 2022 (\$20,000). |             |             |             |             |                             |             |             |              |              |  |  |  |  |  |  |  |  |

**Project Description**  
 There is a need to maintain the replacement of fire apparatus consistent with the recommendation in the fire master plan. One of the difficulties in the acquisition of fire apparatus is the time between the decision to order and the actual delivery, which typically amounts to a minimum of 12 months. This delay makes it important to maintain an active fire truck replacement schedule to ensure that each vehicle is replaced within its normal service life.

**Version Description**  
 Please see document attached for detailed Fire & Rescue First Response Vehicle Replacement Schedule.

**Project Comments/Reference**  
 See Document Attached  
 (Closed: 7051004/7074066/7101014/7131007/7111025)  
 Active: 7121011 (2012 trucks)/7161031/7171013/7181025

**Version Comments**  
 Pricing for the new trucks is an estimate and may fluctuate over the life of the plan. Any salvages received will be returned back to this reserve. Per CR363/2010, Report #14903 the funding source is the Fire Major Equipment Reserve (F163).

**Total Number of Active Units: 32**

**Notes:**

1. Total cost includes purchase price plus capitalization.
2. Estimated replacement cost represents total cost plus an annual inflation factor from the date of purchase. The inflation factor is currently set to 3.00%.
3. Fire and Rescue Services has a separate fleet replacement schedule. The replacement of Fire's small fleet is based on Public Works methodology.
4. Units are placed on the schedule based on an operational assessment. Units are evaluated annually based on a variety of factors to determine if replacements are required in the
5. Highlighted costs in Year 1 indicate replacements scheduled in previous years. They are not included in the total cost for that year.
6. Fitup and equipment costs of \$15,000 per light vehicle and \$80,000 per heavy vehicle have been included in all replacement values in this schedule.

| This project is for the replacement of Parks Off-Road equipment. The Parks off-road equipment is essential to the department and downtime due to equipment repairs results in lost productivity and man-hours, which results in the department's inability to meet expected service levels. Parks makes every effort to repair and in some cases rebuild equipment during the off-season. |                      |                                    |                  | Please see document attached for Parks Equipment Replacement schedule.<br><br>The Parks & Recreation departments have experienced significant growth with gateways, vacant lots, WFCU, etc. The Parks' off-road equipment inventory has grown with the workload but at the neglect of existing replacement needs. Additional equipment has been added to the Parks inventory related to added corporate initiatives approved in 2018 such as enhanced roadside ditch cutting, maintenance of vacant properties, phragmites control, Peche Island, and Riverfront trail clean up. |  |             |             |             |                             |             |             |                  |                   |  |

**Notes:**

1. Total cost includes purchase price plus capitalization.
2. Estimated replacement cost represents total cost plus an annual inflation factor from the date of purchase. The inflation factor is currently set to 3.00%.
3. Units are placed on the schedule based on an operational assessment. Units are evaluated annually based on a variety of factors to determine if replacements are required in the
4. Highlighted costs in Year 1 indicate replacements scheduled in previous years. They are not included in the total cost for that year.

\* Expected life ranges provided by MWH Petroleum, Waddick Fuels, and AssetWorks.

\*\* Replacement year to be selected within expected life range. Historically, above ground storage tanks have lasted 20 years on average and dispensers over 15 years. Replacements of all other components have been assigned to the first year of the expected life range.

\*\*\* Replacement costs based on estimates provided by suppliers and inflated historical costs and do not include clean up costs of any contaminated soil or ground water. See the Replacement Cost Estimates sheet for details by component. Replacement cost for Lakeview Marina fuel site not estimated by Technical Support. It is based on the approved 2016 capital budget amount (details not known).

\*\*\*\* Replacement costs from "&CostYear&" inflated annually by "&Inflation\*100&"% (not compounded)."

\*\*\*\*\* Underground unleaded fuel tank to be replaced with 2200L aboveground fuel tank with fill-rite pump. The replacement cost is reflected accordingly.

| <b>Project Description</b>  | <b>Version Description</b>  |
| <p>The City of Windsor owns and operates 9 corporate fuel sites. 5 of the sites are automated with the City's fuel management system. The remaining 4 sites are located at Fire stations across the city and rely on manual records. The Fire fuel sites are as follows:<br/>         Station # 1 – 815 Goyeau Street<br/>         Station # 2 – 3121 Milloy<br/>         Station # 3 – 2750 Ouellette<br/>         Apparatus – 2885 Kew Drive<br/>         This project is to address the implementation of the City's fuel management system (FuelFocus) at these 4 Fire fuel sites as per the Fuel Site Review completed in 2014.</p> <p>Automation of the fuel site at the Apparatus Division of Fire, 2885 Kew Drive, was completed in 2017.</p> | <p>Implementation of the automated fuel management system will result in many benefits including the following:</p> <ul style="list-style-type: none"> <li>• Greater efficiency – Because FuelFocus is integrated with our current Fleet Management System, all pertinent information is maintained in a single database eliminating the need for multiple systems which will improve the efficiency of the operation and provide for adequate financial controls. It will also eliminate human error inherent with manual data entry.</li> <li>• Cost Savings – FuelFocus will not allow operators to pump more fuel into their vehicle than its known fuel tank capacity, or allow the wrong type of fuel to be dispensed.</li> <li>• Accuracy and Consistency of Information – With a single data source, key information is always current (e.g. work information, fuel transactions). The timeliness of preventative maintenance scheduling is improved with more accurate hour meter and odometer readings. It also will restrict access to unauthorized users.</li> </ul> <p>The estimated cost for this project includes the purchase of hardware for each site, software licenses and installation services.</p> |

**Project Description**

The City of Windsor owns and operates 10 fuel sites at the following locations:  
 Crawford Yard - 1531 Crawford Avenue  
 McDougall Parks Yard – 2461 McDougall  
 Malden Park – 4255 Matchette Road  
 Little River Parks Yard – 9578 Little River Road  
 Environmental Services Yard – 3540 North Service Road  
 Fire Station #1 – 815 Goyeau Street  
 Fire Station #2 – 3121 Milloy  
 Fire Station #3 – 2750 Ouellette Avenue  
 Fire Apparatus – 2885 Kew Drive  
 Lakeview Park Marina – 9200 Riverside Drive East

On behalf of the government of Ontario, the Technical Standards and Safety Authority (TSSA) regulates fuel sites to ensure conformance to the Technical Standards and Safety Act, 2000, and applicable regulations, codes and standards. The Liquid Fuels Handling Code is a provincial code developed by the TSSA and regulates the storage and handling of fuels at bulk plants, marinas, retail outlets and private outlets. This project is to ensure the safe operation of all corporate fuel sites and to maintain compliance with provincial regulations.

**Version Description**

Funds are required at the fuel site located at Fire Headquarters to cover the costs to remove the underground unleaded and diesel fuel tanks, install a new above ground unleaded tank, and to automate the fuel site with the corporate fuel management system.

Work to be Completed in 2018 per CR358/2018:  
 \* \$24,000 - Removal & disposal of the underground tanks including site restoration  
 \* \$35,000 - Remediation of site in case of contamination of soil/groundwater (estimate based on previous site remediation at a former Fire fuel site location)  
 \* \$ 4,000 - Installation of new 2,200 litre aboveground tank for unleaded fuel  
 \* \$ 3,000 - Install an emergency shut-off right at the pumps and another at the building to comply with proposed change to the Liquid Fuels Handling Code  
 \* \$44,000 - Installation of FuelFocus ICU including hardware, software licence and work require to make the site ready for the ICU installation (electrical, network, etc.)  
 \* \$22,000 - Contingency

The Liquid Fuels Handling Code 2017 was adopted by the TSSA on June 14, 2017 and is effective October 1, 2017. As a result, improvements are required to ensure compliance with the new regulation.

**Notes:**

1. Total cost includes purchase price plus capitalization.
2. Estimated replacement cost represents total cost plus an annual inflation factor from the date of purchase. The inflation factor is currently set to 3.00%.
3. Fire and Rescue Services has a separate fleet replacement schedule. The replacement of Fire's small fleet is based on Public Works methodology.
4. Units are placed on the schedule based on an operational assessment. Units are evaluated annually based on a variety of factors to determine if replacements are required in the
5. Highlighted costs in Year 1 indicate replacements scheduled in previous years. They are not included in the total cost for that year.

|---|----------------------|------------------------------|---------------------|--|----------------------------|-------------|-------------|---------------|-------------|-------------|-------------|------------------|-------------------|--|
| <b>Project Description</b>  |                      |                              |                     | <b>Version Description</b>   |                            |             |             |               |             |             |             |                  |                   |  |
| <p>FleetFocus is the corporate fleet management software solution utilized to track all functions related to the maintenance of vehicle and equipment including processing of repair and preventative maintenance work orders and capturing operating expenses (i.e. fuel, parts, licensing, insurance, depreciation). It is also utilized to manage fleet replacement planning as well as parts and tool inventories.</p> <p>The software is used by the Public Works Operations Department, Transit Windsor and Fire. As a result of the Fleet Shared Service Review, Parks and Police are also implementing the FleetFocus software for use in managing their fleet operations. Migration to a web based system will allow users to leverage new features and gain efficiencies, improve system availability and decrease maintenance requirements. Upon implementation of the web based system, expansion is planned for the Airport to also utilize the system. This budget request is for the increased costs quoted by the vendor for the web modules as well the impact of the US exchange rate. It should be noted that the version of FleetFocus currently being utilized has already passed its end of life, therefore, vendor support may be limited.</p> |                      |                              |                     | <p>In order to gain efficiencies, it is recommended that the FleetFocus web modules be purchased and implemented during the next system upgrade. These modules will make FleetFocus a web based application, provide many role-based portals, and provide enhanced reporting functionality. Moving to a web based software application will allow users to access the software from any network connected personal computer and decrease the maintenance requirements for the Information Technology Department. It will also allow users to leverage new features as new development and enhancements are directed towards the web version of the software.</p> <p>The estimated cost of this project includes the purchase of software licences, implementation services and training. There is an annual software maintenance fee that is shared among the five fleet areas which is currently in the Operating Budget.</p> |                            |             |             |               |             |             |             |                  |                   |  |

**Project Description**  
 Funds are required to cover the cost of fleet additions and upgrades required to maintain service delivery levels. While the capital budget is based on a 5-year plan, fleet requests are provided on an annual basis, therefore, submissions will be made each year based on user requirements.  
  
 All requests are subject to review by the Fleet Review Committee.

**Version Description**  
 2019:  
 Add 2 minivans or electric vehicles for Contracts, Field Services, and Maintenance (Operating Budget Approvals: 2018-0081, 2018-0171)  
 Add 1 full size van for Facilities (Operating Budget Approval 2018-0121)  
 Add 3 minivans or electric vehicles for Building (Operating Budget Approval 2018-0206)  
 Add various vehicles related to positions added in 2019  
 2022:  
 Add 1 bus for Huron Lodge  
 Unforeseen/Emergency Additions  
 2023 - 2025:  
 Unforeseen/Emergency Additions

## Addition of One Administrative Inspector Position

This issue seeks the addition of one administrative inspector position partially funded by capital and sewer surcharge (1/3 each). The workload has increased drastically over the past 5 years related to courtesy backwater valve and sump pump inspections under the basement flooding protection program, sewer replacement and repair permit inspections, driveway entrance permit inspections, Public Works permit inspections, inspections related to violations of By-Law 25-2010, requests for service calls received through 311, and inspections regarding right-of-way encroachment agreements.

**Recommendation:** Recommended by Department

**One-Time Funding:** n/a

### Issue Detail

The Public Works Department historically had 3 Local 543 Administrative Inspectors. This was reduced to 2 positions in the late 1990's. The workload has greatly increased in the past 5 years due to the initiative started by Administration to take back control of the public right of way. Some examples of this are requiring Utilities to obtain permits for work in the right of way, Requests For Service for right of way issues through 311, violations and orders issued under By-Law 25-2010, annual non-residential encroachment inspections that we collect fees to undertake and the newly added courtesy inspections for the basement flooding protection program.

The statistical data below was compiled directly from our corporate Amanda database system.

#### Encroachments (EN):

When encroachment agreements are entered into with property owners for use of the right of way, an inspection is required to confirm that the physical requirements of the encroachment have been met. Annual inspections of non-residential encroachments are now required as we are collecting fees for these inspections from the encroachment agreement holders. The numbers below show the years and the inspections required for those years.

|      |   |   |
|------|---|---|
| 2010 | - | 31  |
| 2011 | - | 43  |
| 2012 | - | 96  |
| 2013 | - | 47  |
| 2014 | - | 45  |
| 2015 | - | 1558  |
| 2016 | - | 1575  |
| 2017 | - | 1600 projected annual number of inspections |

#### Requests For Service (RFS):

When 311 received calls for issues in the right of way (not maintenance issues), the calls were previously shuffled from department to department hoping somebody would answer them. In meeting with 311 in 2013, a protocol was established for right of way complaints and how those complaints could be investigated and dealt with by Public Works under By-Law

25-2010 through the Administrative Inspectors. These are mostly public safety issues and issues around damage to our infrastructure in the right of way. Previously, the damage would eventually have to be repaired by PW Maintenance but now we hold the party responsible for the cause of the damage responsible for it and they pay to repair it. The numbers below show the years and the RFS calls that have come in that created a required inspection for those years.

|      |   |  |
|------|---|--|
| 2010 | - | 1  |
| 2011 | - | 0  |
| 2012 | - | 0  |
| 2013 | - | 45   |
| 2014 | - | 309  |
| 2015 | - | 402  |
| 2016 | - | 603  |
| 2017 | - | 322 (1/2 year stat) projected annual to be 644 |

Violations Under By-Law 25-2010 (VPW):

After an investigation into a right of way issue or complaint, orders may be written to the contravener under By-Law 25-2010. The contravener may be a utility company, contractor or property owner. These orders require an initial visit to investigate and then a subsequent compliance visit. Therefore, for every VPW shown below, a minimum of 2 site visits are required. The numbers below show the years, the VPW's created and the minimum number of inspections required for those years. The tracking of VPW violations in the Amanda System began in 2012 so there are no records before then.

|      |   |     |   |   |
|------|---|-----|---|---|
| 2012 | - | 138 | - | 276   |
| 2013 | - | 259 | - | 518   |
| 2014 | - | 349 | - | 698   |
| 2015 | - | 357 | - | 714   |
| 2016 | - | 300 | - | 600   |
| 2017 | - | 115 | - | 230 (1/2 year stats) projected annual to be 460 |

Public Works Permits (PW):

Public Works permits are issued for oversized moves, utility cuts and landscaping in the right of way. The increase has been due to the utility companies now being required to obtain permits to work in the right of way so that the final restoration can be undertaken by PW Maintenance. Most permits require a minimum of 2 inspections, one for pre-construction photos and the second for the temporary final inspection. Some of the permits are for multiple blocks so can be very time consuming. The numbers below show the years, the PW permits created and the minimum number of inspections required for the PW permits created.

|      |   |      |   |  |
|------|---|------|---|--|
| 2010 | - | 211  | - | 422  |
| 2011 | - | 353  | - | 706  |
| 2012 | - | 384  | - | 768  |
| 2013 | - | 519  | - | 1038   |
| 2014 | - | 998  | - | 1996   |
| 2015 | - | 1163 | - | 2326   |
| 2016 | - | 836  | - | 1672   |
| 2017 | - | 460  | - | 920 (1/2 year stats) projected annual to be 1840 |

Driveway Entrance Permits (DV):

Driveway entrance permits are for new or reconstructed drive approaches in the right of way. Temporary driveway entrance permits are now issued to private property builders and then a second driveway entrance permit is issued to the property owner post construction. The temporary permit allows for the curb to be cut for private property access during construction and then the second permit is for the construction of the driveway approach itself. These permits may require up to three inspections. First for a location inspection prior to construction, second for a base inspection during construction and third for a final inspection after construction is completed. The numbers below show the years, the DV permits created and the minimum number of inspections required by the creation of the permits for those years.

|      |   |     |   |      |
|------|---|-----|---|------|
| 2010 | - | 394 | - | 1182 |
| 2011 | - | 422 | - | 1266 |

|      |   |     |   |  |
|------|---|-----|---|--|
| 2012 | - | 435 | - | 1305   |
| 2013 | - | 519 | - | 1557   |
| 2014 | - | 598 | - | 1794   |
| 2015 | - | 752 | - | 2256   |
| 2016 | - | 811 | - | 2433   |
| 2017 | - | 286 | - | 858 (1/2 year stats) projected annual to be 1716 |

Sewer Replacements & Repairs (SR):

Sewer replacement and repair permits are issued to work on private drain connections or sewer taps in the right of way. These permits usually require 3 or 4 inspections, the first one for pre-construction photos, the second one for the sewer tap or repair inspection, the third for the CCTV inspection and sometimes a final is done after the CCTV inspection creating a fourth inspection, depending on the work. For this exercise, three inspections will be used. The numbers below show the years, the SR permits created and the minimum number of inspections required by the creation of the permits for those years.

In addition to the statistics on the Public Works inspectors provided above, some statistics have also been gathered in consultation with the By-Law Enforcement and Building Departments concerning the By-Law Enforcement Officers and Building Inspectors in comparison to our current Administrative Inspectors as follows:

By-Law Officers

Approximate number of calls for 2015 (includes complaints and required follow up) = 24,600  
 Average Calls per day required = 10  
 Staff of Officers = 12  
 Average Number of Calls per Inspector per Year = 2050

Building Inspectors

Approximate number of calls for 2015 (includes permit inspections, complaints and required follow up) = 24,000  
 Average Calls per day required = 8.5  
 Staff of Inspectors = 13  
 Average Number of Calls per Inspector per Year = 1847

Administrative Inspectors

Approximate number of calls for 2016 (includes permit and encroachment inspections, complaints and required follow up) = 8,874  
 Average Calls per day required = 6  
 Staff of Inspectors = 2  
 Average Number of Calls per Inspector per Year = 4338

The requested positions would be 1/3 funded from the Flood Abatement Program (Capital) and 1/3 funded from sewer surcharge to fund sewer related inspections.

Should Council approve the addition of this position, a seasonal vehicle will be provided to the department as required until a capital addition can be approved to purchase a dedicated vehicle in the 2019 capital additions project OPS-022-07.

**Annual Inspector Requirements**

| Year | Total # of Inspections Required | Annual Inspections per Inspector | Total # of Inspectors Required to Complete Annual Inspections |
|------|---------------------------------|----------------------------------|---|
| 2010 | 2,935                           | 1,560                            | 1.9   |
| 2015 | 9,353                           | 1,560                            | 6.0   |
| 2016 | 9,076                           | 1,560                            | 5.8   |
| 2017 | 8,638                           | 1,560                            | 5.5   |

Note: Inspectors work 8 hours per day and can be reasonably expected to complete an average of 6 inspections per day including the required paperwork and travel time. 6 inspections x 5 days per week x 52 weeks = 1,560 inspections annually (on average).

## Addition of One MiniVan for Field Coordinator Position

This issue adds a minivan for the permanent Field Coordinator position added in 2016, filled in 2017. A vehicle for this position was not added at the time the position was submitted for approval, however Administration has determined that a vehicle is now required. The vehicle cost would be fully recoverable from various capital programs. Should Council approve this vehicle addition, a seasonal unit will be provided to the department as required until a capital addition can be approved to purchase a dedicated vehicle in the 2019 capital additions project OPS-022-07.

Recommendation: Recommended by Department

One-Time Funding: n/a

### Issue Detail

A permanent Field Coordinator position was approved and added in 2016, budget issue 2016-0174. A vehicle for this position was not added at the time the position was submitted for approval. Administration has determined that a vehicle is required.

This vehicle would be fully recoverable from various programs along with the wage costs for this position.

Should Council approve this vehicle addition, a seasonal unit will be provided to the department as required until a capital addition can be approved to purchase a dedicated vehicle in the 2019 capital additions project OPS-022-07.

## Reinstatement of Painter Brush Position

To reinstate the Painter Brush Position (L543 Classification 0.15) into the 2018 Operating Budget as per the arbitrator decision in 2017.

Recommendation: Recommended by Department

One-Time Funding: n/a

### Issue Detail

As per an arbitrator decision in mid-2017, the Facility Operations division is now required to reinstate the Painter Brush Position (L543 Classification 0.15) into the 2018 Operating Budget.

## Convert 3 Temporary Building By-Law Officers to Permanent Positions

This issue will convert 3 current temporary Building By-Law Officers to permanent positions to handle property standards issues. There is no anticipated impact to the tax levy by approving this issue. The temporary staff reduced the complaints backlog from 1200 to 300 during their tenure the past year.

**Recommendation:** Recommended by Department

**One-Time Funding:** n/a

### Issue Detail

The primary focus of these positions will be property standards and zoning compliance related issues. Property standards has been a voiced concern by City Council in recent years and relates to the many derelict properties scattered throughout the municipality. This effort would work toward and maintain the beautification and clean up of our city.

In 2017 the department concluded a 1 year pilot project employing 3 temporary Building By-Law Officers. They were being paid with funds that would normally be used to pay Building Inspectors for time spent on tax levy funded work like property standards enforcement. The relieved tax levy funded efforts of the Building Inspectors allowed them to focus more on Building Code enforcement and consequently be funded entirely from Building Permit revenue. The Building By-law Officers focused on property standards and zoning compliance across the city. Considerable progress was made but the task still looms large and perpetual. Revenues collected in the form of fines against non-compliant property owners for year 2017 are on track to total \$136,550. Permits fees generated for repair work are in a pattern of approximately \$30,549 for 2017. The 3 temporary staff managed to reduce significantly the prior back log of calls and complaints outstanding. Positive feedback to the department has been received during the past year that the enhanced effort was reducing the number of calls from constituents. The department was also more able to accommodate the 30 day standard turn around time on calls received.

This budget request asks for the 3 temporary positions to be made permanent. The objective will be a strong impact in enforcing property standards, zoning and other by-laws typically enforced by the department Building Inspections Division. Administration anticipates and proposes that the positions can be largely self funded by the department. This would be accomplished by revenue generated from an increase in fines issued as well as building permits generated for corrective work. Some levy funded property standards work currently being done by the Building Inspectors will also be allocated to fund the 3 Building By-law Officers. Therefore Administration perceives no net impact on the tax levy from this initiative. The Inspectors relieved of property standards work will then be able to focus on building code work. Current Ontario Building Code Legislation dictates many demands and guidelines for municipalities to adhere to in Code enforcement. The proposed dedication of Inspectors to Building Code work will greatly improve our ability to meet those expectations as well as address current back logs. The prior Inspectors levy funded portion being allocated to pay for the proposed Building By-law officers will in turn now put equal pressure on the Building Permit Fees Reserve and/or permit revenue as the Inspectors still need to be funded for that portion. That amount will be \$132,500.

The total cost to hire and equip the 3 proposed Building By-law positions is \$299,595 per year. Offsetting this cost is additional fines revenue of \$136,550 and permit revenue of \$30,549 that is expected based on current patterns in addition to using current levy funding (\$132,500) to be shifted from the Inspections Division.

Fines revenue of \$136,550 are derived from years 2016 and 2017 actual patterns of orders issued by the 3 temporary

staff and are categorized as follows:

|                           |                                  |
|---------------------------|----------------------------------|
| Property standards orders | \$109,600/yr (400 count x \$274) |
| Zoning orders             | \$26,950/yr (110 count x \$245)  |
| Total                     | \$136,550/yr                     |

Permit revenue of \$30,549 is estimated based on patterns of permits issued for property standards repair orders issued.

Summary of Annual Funding Model for 3 Building By-law Officers

|  |             |
|--|-------------|
| Operating Costs:                           | \$299,599   |
| Revenue from fines:                        | (\$136,550) |
| Permit Revenue:                            | ( \$30,549) |
| Funding shifted from Inspections Division: | (\$132,500) |

| <b>Project Description</b>   | <b>Version Description</b>  |
| <p>The City of Windsor has a number of plans that identify greening the fleet as an objective for the Fleet Division. The Environmental Master Plan identifies greening the fleet as an objective to reduce air emissions caused by City vehicles in order to create healthier communities. To demonstrate the City's commitment toward reducing its environmental impact, City Council adopted a resolution (M502-2012) to receive the Green Fleet Plan for information and approve it as a guiding document for the operation and management of the City's fleet. The plan includes an action item to "consider the purchase of green vehicles including hybrid, electric or alternative fuel vehicles where one is available in the appropriate class of vehicles and is operationally and economically feasible." Furthermore, Council recently approved the City's Corporate Climate Change Action Plan (CCAP) which aligns with the Ontario Climate Change Action Plan which includes electric vehicle incentives.</p> <p>This project is to assist with implementing new technologies, vehicles and equipment to green the city fleet to reduce emissions and reduce the total cost of fuel. For vehicles included in the City's fleet equipment replacement plans, this project is to provide funding for the incremental costs.</p> | <p>The Fleet Review Committee approved the implementation of a pilot electric vehicle program in 2017. The Ontario government's modernization of the electric vehicle incentive program has made electric vehicles more affordable by offering incentives in 2017 for the purchase of electric vehicles as well as charging stations. Additionally there is a greater selection of electric vehicles from all manufacturers available for consideration. With the elimination of these incentive programs and grant funding opportunities, expansion of electric vehicles in the corporate fleet will require capital funds for the incremental vehicle costs as well as the purchase and installation of electric charging stations.</p> |

| <b>Project Description</b>   |
| <p>Upgrade of the Infor Hansen infrastructure management software system and the implementation of a mobile solution for Hansen.</p> <p>The Infor Hansen system is used by Public Works and corporately for infrastructure asset management and work order management to track &amp; record infrastructure assets, work order repair histories, inspections, condition ratings, and repairs performed. The system is used to manage the road network assets, sewer &amp; drainage networks, bridges, sidewalks, railway grade crossings, private drain connections, etc. The system is also used by Parks Forestry to manage the tree inventory and related forestry activities.</p> <p>The proposed upgrade will move the software from Hansen Version 8.2.3 to the latest version. The first priority for the implementation of a mobile solution for Hansen is the sidewalk inspection program. Mobility could then be expanded to other field inspection programs and field work in the future. An upgrade to the base system software is required for the implementation of a mobile solution for Hansen.</p> |

|  |
|--|
| <b>Version Description</b>   |
| <p>The last software upgrade was completed in 2012 (Hansen 7 to Hansen 8.2.3 web-based). Upgrades are recommended as a component of regular software system maintenance to leverage new features, enhancements, and development in the software and to maintain system compatibility with other systems that it must communicate with in order to function. An upgrade to the latest version of Hansen is recommended at this time and needed to implement mobile technologies and other features.</p> <p>The project includes the implementation of a mobile solution to improve data availability and operational efficiency in-the-field by:</p> <ul style="list-style-type: none"> <li>• reducing the number of hard copy forms,</li> <li>• eliminating data entry backlogs,</li> <li>• expediting the release of inspection results and issuance of work orders,</li> <li>• enabling real-time data capture during data collection, inspections, and repairs</li> <li>• querying capabilities of asset information, work orders, &amp; inspections in the field</li> </ul> <p>The first priority for the mobility implementation is the sidewalk inspection program.</p> <p>The preliminary project estimate includes software licensing, software support costs, hardware &amp; devices, professional services (upgrade &amp; mobility), and internal resources. The preliminary cost breakdown is \$115k for the Upgrade (Phase 1- 2019 to 2020) and \$160,000 for Mobility (Phase 2 – 2020 to 2021).</p> <p>The preliminary cost estimate is \$275,000. A placeholder of \$50,000 in funding is currently available in the Asset Planning Service Design and Implementation Project (Project 7131117) pending approval by the Asset Planning Steering Committee. The approval of the Asset Planning Steering Committee is contingent on the approval of the balance of project funding in principle by Council. This capital budget submission requests the remaining \$225,000 needed to fully fund this project.</p> |

| <b>Project Description</b>  |                      |                                    |                  | <b>Version Description</b>   |  |              |                |                             |                |                |                |                  |                   |                  |
| The useful life of the LEDs ranges from 7 – 10 years. At the time of purchase, LEDs have a 5-year warranty on lumen output, and will be replaced free of charge if they fall below acceptable lumen levels or have any type of failure within the warranty period. The brightness of the LEDs older than 5-years is monitored regularly for re-prioritization in the LED replacement plan. Visual inspection will be undertaken to prioritize the locations requiring LED replacement annually. |                      |                                    |                  | Full conversion of LED signal heads was completed in late 2013/early 2014. Replacement of LEDs that have reached the end of their useful life cycle has commenced on Huron Church Road and will continue on this arterial until completed. We will then continue on with the priority list which is based on life cycle of LEDs currently installed. |  |              |                |                             |                |                |                |                  |                   |                  |

| <b>Project Description</b>  |                      |                              |                     | <b>Version Description</b>  |   |             |             |             |             |             |             |             |                  |                   |
| <p>There are several pieces of equipment used in the day to day operations for the On/Off Street Parking Division that require upgrading/replacement over the next several years due to age and new payment technologies.</p> <p>This project is funded from the On-Off Street Parking Reserve Fund. The balance in the On-Off Street Parking Reserve Fund as of December 31, 2017 is \$175,437. The current 10-year reserve forecast, including the capital funding for this project, projects this reserve will remain sustainable.</p> |                      |                              |                     | <p>An annual allotment of funds is identified for replacement of equipment each year. Equipment being replaced includes parking meters, exit gates, entrance gates, cameras, server for new web based parking ID equipment, pay stations, pay &amp; display machines. Replacements could be a result of upgrading of technology and / or replacement due to age or repair requirements.</p> |   |             |             |             |             |             |             |             |                  |                   |

| <b>Project Description</b>  |                      |                                    |                  | <b>Version Description</b>  |  |             |             |                             |             |             |             |                  |                   |              |
| Signalized systems are designed to provide coordination, reduce stops and delays and provide green times based on vehicle demand and adapt to ever-changing traffic conditions. Properly operating traffic signal systems provide significant cost savings to the motoring public by reducing stops and delays which results in increased fuel mileage, reduced maintenance costs, accidents and travel times. These improvements are very visible to the public. Less than optimal operation is often a source of driver frustration, leads to increased congestion and reduced roadway operation. Vehicle detection is the critical component needed to provide optimal traffic signal operation and obtain the benefits noted. |                      |                                    |                  | This project will provide for Video Detection implementation and the associated infrastructure improvements required for its implementation. Historically, vehicle detection systems are embedded into road surfaces. Due to weather conditions (freeze-thaw cycles), vehicle wear and tear and roadway deterioration, the traditional vehicle detectors fail after 5 years of operations and much more quickly once road surfaces start to fracture. Video Detection Systems have progressed over the last five years, providing a reliable vehicle detection system which is not impacted by road conditions, weather or other external factors. Video detection is a prerequisite to the implementation of adaptive signal operation modules and strategies. The funds will be used for installation of video detection on arterial and collector roads not completed. |  |             |             |                             |             |             |             |                  |                   |              |

| On January 1, 2016 AODA legislation requires the installation of audible pedestrian signals under three scenarios, 1) at new traffic signals, 2) at signals which are being upgraded and 3) at locations where more than 50% of pedestrian heads are being replaced. The budget for new and upgraded signals are included in the appropriate new capital program 7045076 - New Signals & Signal Systems Improvements however, there is no budget allocation for those locations under scenario 3. The cost to implement audible pedestrian signals for an all directional crossing (4 crosswalks at the intersection) is approximately \$9,000. |                      |                                    |                  | Funds will be used to install audible signals at intersections where they are required.  |                              |  |             |                             |             |             |             |                  |              |                   |

**Project Description**  
 Council approved upgrading of the ATMS system via CR636/2002 implementing a staged approach to traffic signal system upgrades. Stage 2 was approved by CR359/2005 to commence the workstation interface. CR71/2010 approved the pilot project for implementation of the 2070 controller and D4 firmware, communications system upgrade to ethernet from serial communications, system components to facilitate/integrate the 2070 and ethernet communication systems. Successful implementation of the pilot project made the 2070 the standard controller. This project will be ongoing.

**Version Description**  
 The requested funds will be used for continued upgrading and addition of enhancements to the KITS/ATMS and continued upgrading of traffic controller equipment to the 2070 controller. This also includes upgrading the communication system to Ethernet from serial via fiber, VDSL, and broadband, replacement of central system hardware, implementation of central system modules, continued upgrade of KITS/ATMS enhanced operational functionalities (\$220K), VIVDS integration packages (\$200K), VideoXpert integration (\$40K), travel time monitoring (\$75K), adaptive traffic (\$600K) and other features, continued CCTV camera expansion, and installation of ITS components associated with the system. Although the method of data acquisition has not been determined yet, the system can currently provide data for autonomous vehicles. Data acquisition method is to be determined in the future.

### Project Description

This project covers new and existing signals, and signal system upgrades required to ensure a safe operating system for the user. There are 289 signalized intersections operated by the City of Windsor. According to industry standards, the average life cycle of a signalized intersection is 20 years. In 2019, there will be 67 signalized intersections 30 years of age or older, and an additional 109 intersections 20 years of age or older. 20-30 year old signalized intersections represent 60% of the traffic signal infrastructure in the City of Windsor. Currently these intersections are listed in the City's asset management program at an operational level of poor. Signal systems cannot be allowed to operate at a level of poor as this would indicate that the system is in danger of failure. When an intersection experiences an issue that places them in very poor condition, maintenance is performed to ensure failure will not occur. At this time, an upgrade may be required as a more permanent solution.

The average cost to rebuild a signalized intersection ranges from \$90,000 to \$140,000. In 2019, a total of 176 intersections will need to be upgraded to ensure all signals are within the 20-year life cycle. Each year after, an average of 15 signalized intersections will require upgrades to meet the scheduled replacements. It is not possible to upgrade all of these intersections in one year, therefore, funding is required on an ongoing basis with intersections upgraded based on priority.

### Version Description

By the end of 2018, the majority of intersections will have new controllers, however, no additional upgrades have been completed. Upgrades required may include replacement of old or damaged poles, mast arms, pole bases, cabinets, cabinet / system components, wiring, conduit or other components of the system. In 2019, funds will be used for material and construction costs to upgrade above ground equipment and underground infrastructure. Intersection upgrade priorities will be determined on a year to year basis based on age and condition of equipment.

### Version Comments

PRE-COMMITMENT:  
CR628/2017, Report # C 169/2017 approved a pre-commitment of \$22,652 in 2019 under the Connecting Links grant program.

# Project Version Summary

**Project #** OPS-018-07      **Service Area** Office of the City Engineer  
**Budget Year** 2019      **Department** Public Works  
**Asset Type** Unassigned      **Division** Traffic Operations & Parking  
  
**Title** Parking Garage Capital Improvements  
**Budget Status** Council Approved Budget  
**Major Category** Transportation Infrastructure  
**Wards** Ward 3  
**Version Name** Main (Active)

**Project Description**

Ongoing municipal parking garages improvements as required. Installation of protective membrane acts as a barrier to protect the concrete from water and salt penetration. Without this membrane, structural repairs will arise due to corrosion. These membranes have a life expectancy of 5-10 years, therefore ongoing project funding is required. Currently, inspections are done annually to determine rehabilitation priorities. There are 6 floors at the Pitt/Goyeau parking garage which have the membrane in place plus the exit spiral. Historically, a \$200,000 allocation would complete 1 floor in the Pitt/Goyeau parking garage or half of the exit spiral. With CPI increases, this amount has now increased to \$250,000.

This project is funded from the On-Off Street Parking Reserve Fund. The balance in the On-Off Street Parking Reserve Fund as of December 31, 2017 is \$175,437. The current 10-year reserve forecast, including the capital funding for this project, projects this reserve will remain sustainable.

**Version Description**

Condition assessment reports are complete for 2017/2018 as the assessments are completed every two years. The report details the capital works priorities for each garage. In the five year timeframe, conversion of lighting in the parking garages to LED should be undertaken and planning for upgrading of the elevators in Parking Garage 1 should be considered as the cost will likely exceed \$500,000. Elevator upgrade is tentatively scheduled in 2021.

### Project Description

This project is set up for all anticipated Public Transit Infrastructure Fund (PTIF) phase II funding based on the information provided by the Province at this time. PTIF funding is anticipated to be funded as follows, Federal PTIF Phase II 40%, Provincial funding at 33% and Municipal funding at 27%. As more information is available and the funding is announced, this project will be broken up into specific smaller projects.

With newly anticipated increased funding dollars, there is potential for Transit Windsor's increase in Provincial Gas Tax funding to be used for Capital purposes. If approved by City Council, this new funding would then be applied to cover partial of the Municipality's 27% funding requirement. Since this is unknown at this time, this funding source has not been included. If this was to be approved, the potential incremental Gas Tax funding estimates would be as follows, for 2020/2021 \$2,184,163 and for 2021/2022 and future years, estimated at \$4,073,398. Note gas tax is issued on an April 1 to March 31 fiscal year.

Project TRN 005-17, Transit Service Delivery Review and Project Management, is related to this PTIF Phase II project. As the Service Delivery Review is completed, the findings of the review will have an impact on the future projects Transit Windsor will move forward with.

There is the potential that TRN 005-17 (Transit Windsor Service Delivery Review and Project Management), TRN-004-07 (Transit Windsor Master Plan Implementation) and this project TRN-001-19 could be combined as they are inter related.

### Project Comments/Reference

### Version Description

In a 2015 review, it was recommended that Transit Windsor complete an enterprise wide review of its services, focusing on conventional service, specialized transit services, and development of new transit services. The objectives of this review would be to improve transit efficiencies through innovation, identification and implementation of industry best practices, increase overall ridership, and maximize cost recover.

This project was originally approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.

In May 2018, Dillon Consulting Limited was awarded the contract as the successful proponent for the Service Delivery Review Consultant (RFP NO. 55-18). The review by the consultant has begun and is expected to continue until September 2019. This project also includes funding for the Program Manager, Corporate Projects which has been extended to coincide with the end of the PTIF program. The comments listed below are to prepare Transit Windsor for transitioning to PTIF Phase II, which is expected to be confirmed in 2019. Transit Windsor has provided its best estimates on available funding at this time. A change in estimates will be reported to City Council as soon as it becomes available.

Transit Windsor is projecting the following needs for PTIF Phase II funding:

Transit envisions Phase II to include the rollout of the strategic service plan which will provide clear direction for improvements to be implemented. The plan will include identifying gaps in current service and opportunities for service improvements in keeping with best practices (including route revisions, service standard revisions, transit infrastructure requirements and strategies to increase ridership).

Transit Windsor anticipates that the service review will also identify existing and possible transit services with neighbouring municipalities and the steps to establish a form of regional transit. Creating a better network for Transit Windsor will be the objective of the service review.

Transit Windsor also envisions items coming out of the review to accomplish this to include:

- The potential for a Bus Rapid Transit (BRT) route
- An assessment on the need for a new or upgraded transit garage facility along with facility enhancements
- New transit technology to assist with better traffic integration and customer amenities i.e. smart traffic lights for buses as they approach traffic lights, Wi-Fi on buses,

The Service Delivery Review will also work in conjunction with the Active Transportation Master Plan that is being completed for The City of Windsor.

### Version Comments

Placeholder for future PTIF Phase II projects. Funding in anticipation of PTIF grants.

# Project Version Summary

**Project #** TRN-003-07      **Service Area** Office of the City Engineer  
**Budget Year** 2019      **Department** Transit Windsor  
**Asset Type** Unassigned      **Division** Administration - Transit Windsor  
  
**Title** Transit Windsor Customer Service Improvements - Shelters/Signage/Amenities  
**Budget Status** Council Approved Budget  
**Major Category** Transportation Infrastructure  
**Wards** City Wide  
**Version Name** Main (Active)

**Project Description**  
 Customer service requirements include the ongoing purchase and installation of bus shelters, schedules at bus stops, bus stop signage and other amenities to meet customer needs. This also includes concrete pads which are installed prior at bus shelters and at bus stops without bus shelters so that the area is more accessible to the customer. The ongoing shelter program will continue as will the replacement of bus stop signs.

**Version Description**  
 Funding for customer service amenities such as shelters for 2018-2021 have been funded under the Public Transit Infrastructure Fund (PTIF) Phase 1. See project TRN-009-17.

|---|---|
| <p><b>Project Description</b></p> <p>The Transit Master Plan focused on an overall improvement to customers' needs including route improvements and amenities. The Master Plan indicated that the number of shelters be increased at a rate of 7.3% from the existing number, however, this does not account for the replacement of aging or damaged bus shelters. Implementation of new bus stop signage across the city to provide customers with route and contact information at each bus stop has been completed in conjunction with Transit's new Intelligent Information System (ITS) project. As Transit Windsor grows its service, along with the growth of the City of Windsor, customer service amenities will continue to increase in scope, size and importance to include transit terminal amenities, other bus stop amenities and additional customer service needs.</p> <p>Project TRN 005-17, Transit Service Delivery Review and Project Management, is related to this Transit Windsor Master Plan Implementation. As the Service Delivery Review is completed, the findings of the review will have an impact on the future projects Transit Windsor will move forward with.</p> <p>There is the potential that TRN 005-17 (Transit Service Delivery Review and Project Management), TRN-001-19 (Public Transit Infrastructure Fund Phase II and Project Management) and this project TRN-004-07 could be combined as they are inter related.</p> | <p><b>Version Description</b></p> <p>The project funds are set aside and earmarked for passenger/customer amenities as the need arises. In conjunction with the Intelligent Information System (ITS) project, there has been a city wide revamping of bus signs to provide passengers with route and contact information.</p> |

**Project Description**

In a 2015 review, it was recommended that Transit Windsor complete an enterprise wide review of its services, focusing on conventional service, specialized transit services, and development of new transit services. The objectives of this review would be to improve transit efficiencies through innovation, identification and implementation of industry best practices, increase overall ridership, and maximize cost recovery. This project also includes funding for the Program Manager, Corporate Projects.

This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.

**Version Description**

In a 2015 review, it was recommended that Transit Windsor complete an enterprise wide review of its services, focusing on conventional service, specialized transit services, and development of new transit services. The objectives of this review would be to improve transit efficiencies through innovation, identification and implementation of industry best practices, increase overall ridership, and maximize cost recover. This project also includes funding for the Program Manager, Corporate Projects.

In May 2018, Dillon Consulting Limited was awarded the contract as the successful proponent for the Service Delivery Review Consultant (RFP NO. 55-18). The review by the consultant has begun and is expected to be completed by September 2019. This project also includes funding for the Program Manager, Corporate Projects which has been extended to coincide with the end of the PTIF program.

Transit Windsor anticipates that the service review will also identify existing and possible transit services with neighbouring municipalities and the steps to establish a form of regional transit. Creating a better network for Transit Windsor will be the objective of the service review.

The Service Delivery Review will also need to work in conjunction with the Active Transportation Master Plan that is being completed for The City of Windsor.

| <p>This project will review Transit Windsor's fare structure and compare current industry best practices. Included in this project is the implementation of software and website design that customers can utilize and purchase fare products i.e. mobile ticketing and electronic fare payment. Transit industry recognizes that introducing technology to customers helps build and strengthen transit ridership.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> |                      |                                  |                  |  |  |                             |             |                             |             |                  |             |                   |              |              |

| <p><b>Project Description</b></p> <p>This project contains funding for the Transit Windsor fleet replacement program. Prior to 2016, this project included funding for the fleet replacement program and refurbishment or repair costs that extend the useful life of the buses (as reflected in the Historical Approved Budget section). Commencing in 2016, the refurbishment and repair budget funding has been separated into a separate project (project # TRN-001-16). The funding under the Ontario Bus Replacement Program (OBRP) for fleet replacement was cancelled in 2010.</p> <p>Typically included in this project, when funding is available, is the annual acquisition of new buses for Transit Windsor and support vehicles which have become increasingly more expensive to maintain due to the age of the fleet and foreign exchange fluctuations. With such a large and varying fleet of buses and continual fiscal pressures, the City of Windsor commissioned a full lifecycle costing study. In 2015, a study was conducted by Parsons Brinckerhoff to develop a Transit Fleet Asset Management Plan that identified strategies for fiscal expenditures that results in a reduction to Transit Windsor's operating budget. The study recommended that 8 buses be purchased each year. The study was completed and reported to City Council in 2016.</p> | <p><b>Version Description</b></p> <p>Transit Windsor and the City of Windsor has funding from the federal government for transit-related projects, including funds to support the replacement of the existing rolling stock that has exceeded its expected useful life. The replacement of these buses will improve the overall passenger experience, and provide an opportunity for Transit Windsor to encourage commuters to use public transit as their primary mode of transportation. Replacing these buses will also enhance the environment of our neighbourhoods by fostering healthy lifestyles and integrating environmentally friendly transportation systems. As a result of Public Transit Infrastructure Fund (PTIF) 50% funding, Transit Windsor purchased 24 clean diesel buses using capital funding in years 2017 to 2019. These buses were delivered in Q2 of 2018. Funding for these buses is included in project TRN-010-17.</p> <p>The introduction of new and modern vehicles will be another step in the process to encourage behavioural change in the community by improving the competitiveness and attractiveness of public transport. Ultimately the goal is to double the transit modal split by encouraging non-riders to take public transit for selected trips rather than drive their cars and to expand the system to improve service in the region of Windsor and Essex County.</p> <p>In the industry, buses have a projected life expectancy of 12 years with some properties keeping their buses as long as 18 years. Transit Windsor has older buses in its fleet which are costly to maintain and are not environmentally friendly. Transit Windsor has difficulty procuring repair parts and has to salvage parts from other buses to keep the buses on the road. The immediate replacement of newer clean diesel buses will reduce the GHG emissions and allow Transit Windsor to dispose of any bus older than 12 years. The average age of the Transit Windsor fleet is approximately 8 years. Transit Windsor's operations will become more efficient with repairs less costly and these funds can be redirected into providing and expanding service.</p> <p>In addition to the benefit to Transit Windsor's' ridership, the regional community will also benefit from the continuation of an environmentally friendly fleet as this will result in a cleaner community. New buses will be more accessible and modern and replacing the current high floor with lower floor buses will also be especially attractive for seniors and persons with disabilities. Students will also be an important target group as approximately over 40%.</p> <p>The City of Windsor budgets for its capital programs using a seven year plan. Currently the seven-year capital plan has funding budgeted for the replacement of conventional buses in 2017 in project TRN-010-17 as approved under PTIF. This project identifies funding levels required to continue with the implementation of the recommendations outlined in the lifecycle costing study -- that 8 buses be purchased each year. As of 2018, the cost per bus was approximately \$630,000, \$5,040,000 for 8 buses. This project has incorporated a 3% increase annually for the cost of the 8 buses.</p> |

| <b>Project Description</b>  |
| <p>The Intelligent Transportation System provides a unified computerized system with all components needed in today's modern transit buses including:</p> <ul style="list-style-type: none"> <li>• Automatic Vehicle Location</li> <li>• Computer-Aided Dispatch for real time service monitoring</li> <li>• Real Time Passenger Information Systems including Text/SMS, Interactive Voice Response System, and website information</li> <li>• Automated Stop Announcements</li> <li>• Implementation of security cameras on the buses</li> </ul> |

|  |
|--|
| <b>Version Description</b>   |
| <p>The Management Team at Transit Windsor has recognized that there are opportunities for transformation in some operational areas. For the City of Windsor and Transit Windsor, using smart bus technology would greatly improve the delivery of transit services and benefits provided to passengers in the following ways:</p> <p><b>More Predictable Bus Service</b><br/>Through access to real time information, riders would be able to predict the arrival of their bus at a stop including if it has been delayed for some reason. Passengers will have access via web applications or SMS. Third party applications could publish this information through the City's Open Data Initiative.</p> <p><b>Improved Accessibility</b><br/>The automated announcement of the next bus stop would create a more user friendly and accessible public transportation service for an increasingly diverse population.</p> <p><b>More Reliable Service</b><br/>Operators and the Transit Control Centre could monitor the real time status of buses compared to the planned schedule, thus enabling them to address operational issues as they occur.</p> <p><b>Safer Transit Experience</b><br/>By integrating security cameras into the solution, Transit Windsor will have the ability to review documented video footage and follow up on reported incidents. This could also greatly reduce the costs of insurance claims by those claiming injury onboard buses.</p> |

| <b>Project Comments/Reference</b>  |
| <p>7139007</p> <p>On July 6, 2015, City Council approved the Intelligent Transportation System (ITS)/Smart Bus Capital Project (CR129/2015) providing a budget of \$2.7 million to move forward with the ITS project.</p> <p>The agreement with the selected vendor, Strategic Mapping, was executed in November, 2015.</p> <p>The projected impact on the operating budget was identified included in the 2017 operating budget development. There are no anticipated additional costs identified for 2018.</p> |

|  |
|--|
| <b>Version Comments</b>  |
| <p>The project has \$1.7 million approved under the 2013 Enhanced Capital Spending Plan, \$500,000 funded from the 2012 Fleet Replacement Project and as per CR129/2015, a pre-commitment from the 'planned' 2019 Capital Budget for the Transit Windsor ITS Project. In addition, there have been some amendments to the contract with Strategic Mapping for items related to the ITS project that will enhance customer service and the overall experience for the riders.</p> <p>PRE-COMMITMENT:<br/>CR129/2015, Report # 17574 approved a pre-commitment of \$500,000 in 2019.</p> |

| <p>This project has funding for the Transit Windsor fleet refurbishment and repair costs that extend the useful life of the buses or additional vehicle enhancements (e.g ITS System enhancements).</p> <p>The 2018 Capital Budget submission includes a provision for refurbishment and repair or enhancement costs, which is consistent with funding levels provided in prior years.</p> |                             |                                    |                     | <p>As noted in project TRN-001-07, prior to 2016, the fleet replacement project had funding for fleet replacement and refurbishment or repair costs that extend the useful life of the buses. Commencing in 2016, the refurbishment and repair budget funding was reallocated to this separate project.</p> <p>The reduction in year 2022 and 2023 may have an affect on operating as this capital amount is transferred into operating to cover refurbishments and repairs. During these years, refurbishment and repair costs will need to be limited to \$300,000.</p> |  |             |             |             |             |             |             |             |              |              |                |             |           |            |         |                             |   |   |

| This request is to fund the major repair costs to the fleet due to the delay in replacing buses. Transit Windsor expects to continue to accrue costs to keep the existing fleet operational until such time as the older buses can be removed from service. |                      |                                  |                  | This provision will assist in replacing major components on hybrid buses including such as high voltage batteries, DPIM's and the DPF emission system when replacement is required. Industry experience indicates that these two major components start to fail between 6 to 8 years of age. Transit Windsor currently has 29 hybrid vehicles in the fleet and all of these vehicles are currently out of warranty.<br><br>Funding for hybrid fleet refurbishments have been funded under the Public Transit Infrastructure Fund (PTIF) Phase 1. See project TRN-011-17. This project reflects the continuation of the refurbishment program in years 2021 +. |   |             |                             |             |             |             |             |                  |                   |              |

|   |                      |                                  |                  | Unknown   | The life cycle of some of the major components (such as the hybrid batteries and the DPIMs) is challenging to predict. There is no definite date or age as to when these components will require replacement. The replacement costs for the Hybrid ESS battery and DPIM controller are estimated at \$44,000 and \$70,250 respectively. Since 18 hybrid buses were purchased in 2009, there is likelihood that these parts will all require replacement at the same time. |             |                             |             |             |             |             | 0                | 0                 |              |

| <b>Project Description</b>  | <b>Version Description</b>   |
| <p>The current fuel system was first installed in 1988 and upgraded in 2004. The system was originally designed to track and control distribution of all diesel fuel, gasoline, SAE 40 engine oil and transmission oil. Over the years, the influence of new engine and transmission technologies has led to the introduction of additional oils. Also, different business and work practices have triggered more distribution needs and the current system was never upgraded to accommodate these needs.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> | <p>The budget for Transit Windsor's annual bulk fluids is approximately \$154,000. Currently, Transit Windsor is unable to track the usage of bulk fluids (antifreeze, engine oil, transmission fluid, and window washer fluid) back to the bus fleet, which puts Transit Windsor at risk. This upgrade that was completed allows for the effective management and costing of oil usage, by monitoring usage and costing by kilometre, similar to the monitoring of fuel usage litres by kilometre that is currently in place. Implementation of this system ensures that proper controls are put in place to safeguard the inventory of bulk fluids. It also assists in the monthly monitoring of budget versus actual costs in the maintenance area.</p> |

| <b>Project Description</b>   |                      |                      |                  | <b>Version Description</b>   |  |             |             |             |             |             |             |             |              |              |
| <p>In a recent life cycle costing review, it was recommended that Transit Windsor adopt a 12 year life cycle for its buses to improve operational efficiencies. This investment of 12 buses in 2017 and 12 buses in 2018 would allow for buses that have exceeded their useful life to be retired. Internal benefits include financial cost savings and operational improvements. A newer fleet improves the customer experience, reliability of service and reduces CO2 emissions.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> |                      |                      |                  | <p>This project identifies costs matched by PTIF funding, Funding requests for budget years 2020 - 2024+ are reflected in project TRN-001-007.</p> <p>All 24 buses were purchased and received in March 2018. Transit Windsor has submitted an interim claim with the Ministry of Transportation for funding expenditures incurred to date. The project is awaiting grant funding as well as municipal funding scheduled for 2019.</p> |  |             |             |             |             |             |             |             |              |              |

| <b>Project Description</b>   |                      |                                    |                  | <b>Version Description</b>  |                                 |             |             |             |                             |             |             |                  |                   |  |
| <p>Given the age of the facility (approximately 37+ years) and that approximately 80 buses travel through this area on a daily basis, repeated exposure to water and salt has resulted in the need for rehabilitation to concrete surfaces and trench drains. This would avoid operational disruptions by ensuring vehicles are serviced on a timely basis.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> |                      |                                    |                  | <p>This project has been reported as complete when the progress report was submitted to the Ministry of Transportation in December 2017 and federal funding was requested. The project remains open due to the precommitted funds in 2019</p>   |                                 |             |             |             |                             |             |             |                  |                   |  |

| <b>Project Description</b>  | <b>Version Description</b>   |
| <p>Given the age of the facility (approximately 37 + years), regular maintenance has not kept up with the regular use of the maintenance garage to perform mechanical, structural and facility repairs and inspections. This has caused a significant deterioration of the shop floor. Given the health and safety issues this may cause, immediate attention is required to ensure compliance. Any disruption in completing assigned mechanical tasks will result in delays in repairing the fleet.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> | <p>This project will be reported as complete when the progress report is submitted to the Ministry of Transportation for federal funding. The project remains open due to the precommitted funds in 2019</p> |

| <p>Transit Windsor currently operates three high speed doors through which buses enter and exit the central garage. Two of these doors were installed over 30 years ago and show signs of deterioration and failures. Replacing these doors will allow minimal disruption to bus traffic entering and exiting the maintenance garage.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> |                      |                                    |                     | <p>This project will be reported as complete when the progress report is submitted to the Ministry of Transportation for federal funding. The project remains open due to the precommitted funds in 2019</p>   |                                 |             |             |             |             |             |             |                  |                   |  |

| <b>Project Description</b>  |                      |                                  |                  | <b>Version Description</b>  |  |                           |             |                             |             |             |             |             |              |                  |                   |
| <p>Given a recent energy audit of the main transit terminal, it was identified that a makeup/exhaust system requires replacement to ensure improved ventilation and efficiencies. This would generate an expected annual savings of \$18,000 in hydro costs. Further, the installation of a carbon monoxide monitoring system would ensure the safety of employees and customers at this facility.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> |                      |                                  |                  | <p>This project has been reported as completed and will be submitted to the Ministry of Transportation for federal funding as requested. Project remains open due to the precommitted funds in 2020.</p>  |  |                           |             |                             |             |             |             |             |              |                  |                   |

# Project Version Summary

**Project #** TRN-018-17      **Service Area** Office of the City Engineer  
**Budget Year** 2019      **Department** Transit Windsor  
**Asset Type** Unassigned      **Division** Transit Maintenance  
  
**Title** Acquisition of a Commercial Grade Floor Sweeper for Maintenance Garage Floor  
**Budget Status** Council Approved Budget  
**Major Category** Transportation Infrastructure  
**Wards** City Wide  
**Version Name** Main (Active)

| <b>Project Description</b><br>The current equipment is in excess of 20 years old and has exceeded its useful life. Current operating dollars are used to maintain this equipment and could be eliminated by the acquisition of a new commercial grade floor sweeper. This would result in fewer breakdowns and ensure the garage floor is clean of grease and other debris to avoid employee injury.<br><br>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.   |                             |                                  | <b>Version Description</b><br>This project has been reported as complete when the progress report was submitted to the Ministry of Transportation in December 2017 and federal funding was requested. Project remains open due to the precommitted funds in 2020  |               |         |                             |               |           |        |                |             |           |            |         |                             |   |      |   |   |   |      |   |   |   |      |   |   |   |      |   |   |   |      |   |   |   |       |   |   |   |  |               |               |          |  |  |  |  |  |  |  |            |      |      |      |      |      |      |      |       |       |                 |  |  |  |  |  |  |  |  |  |                                   |   |        |   |   |   |   |   |   |        |       |   |        |   |   |   |   |   |   |        |                 |  |  |  |  |  |  |  |  |  |                                     |   |        |   |   |   |   |   |   |        |       |   |        |   |   |   |   |   |   |        |

| <b>Project Description</b>  | <b>Version Description</b>   |
| <p>The current equipment is 25 years old and has exceeded its useful life. Current operating dollars are used to maintain this equipment and could be eliminated by the acquisition of a new commercial grade parts washer. This unit is used to high pressure wash bus parts for re-use and to extend their useful life. A new parts washer would eliminate regular breakdowns experienced with the existing equipment and allow improved efficiency of operations.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> | <p>This project has been reported as complete when the progress report was submitted to the Ministry of Transportation in December 2017 and federal funding was requested. Project remains open due to the precommitted funds in 2019.</p> |

### Project Description

Transit Windsor's main office and maintenance garage located at 3700 North Service Road was opened in April 1978 and operates 24 hours a day and 7 days a week. The facility and many of the building components are past their life expectancy which are experiencing greater capital investment needs to maintain, repair or replace aging components. The regular demands of the facility has identified a number of ongoing capital improvements required to enhance the overall operational efficiency of the facility in order to meet the demands of the community that rely on public transit.

The projects that are of immediate concern at Transit Windsor's main office are the exterior roadwork needs, pedestrian traffic control measures and new fencing needs on the perimeter of the property. The roadway, ditch and drainage on the east side of the property are in desperate need of repair and resurfacing as they have not been repaired in over 20 years. The ditch and sidewalk needs on the west side of the property are also reaching the level of critical repair. Currently, there are no sidewalks on the property. Pedestrians are forced to walk on Transit Windsor's property, which poses a risk to the pedestrian and the Operators as there are buses constantly moving on the property. Transit Windsor would also undertake the replacement of the underground fuel tanks at the same time as the road way work, as these fuel tanks are reaching the end of their useful life and may begin to pose an environmental risk.

In addition, in 2015 a study was conducted by Parsons Brinckerhoff to develop a Transit Fleet Asset Management Plan that identified strategies for fiscal expenditures that results in a reduction to transit's operating budget. Some of these best practices are transferable to the facility and equipment including implementing a life cycle costing program. The facility has a vast array of equipment that is used to run the garage as well as the facility required to support transit operations. The warranty for most of the equipment in the facility has now expired so this program will fund necessary replacement of equipment and facility improvements. Specific attention to equipment and facility requirements to support maintaining a fleet of 112 buses and supporting vehicles, body shop and mechanic workstations, bus servicing area and the transportation area.

### Project Comments/Reference

### Version Description

The following items are anticipated to be included but not limited to the following projects

- Rehabilitate hoist 9# and 10# installation of dewatering system and replacement of hydraulic system. These were removed from scope of PTIF project do to funds.
- Replacement of outdoor furniture at the Windsor International Transit Terminal
- Removal of fence on the North side of property and landscape front of building
- Expansion of staff parking lot for drivers
- New 3 post hoist for articulated buses
- Mill and pave asphalt at Transit Central and repair east roadway 18,924 square yards

## Project Version Summary

**Project #** TRN-002-17      **Service Area** Office of the City Engineer  
**Budget Year** 2019      **Department** Transit Windsor  
**Asset Type**      **Division** Transit Operations

**Title** Transit Maintenance - Safety Assessment at Transit Windsor Property  
**Budget Status** Council Approved Budget  
**Major Category** Corporate Property Infrastructure  
**Wards** Ward 5, City Wide  
**Version Name** Main (Active)

### Project Description

Transit Windsor has over \$50 million dollars invested in its fleet and equipment and given the community's reliance on public transit, any disruption to Transit Windsor's operations would disadvantage many individuals in the community. Based on the assessment conducted by Windsor Police, Transit Windsor has already implemented low cost recommendations to improve safety at its facility. The report states: "From a Crime Prevention Through Environmental Design (CPTED) perspective, the building is vulnerable to limitations in natural surveillance, combined with deficiencies in access control, activity management, and behavior engineering."

The following are larger and more costly solutions required to better secure the site and facility.

1. Trespassing & Access Control – There is a very tangible risk with trespassing at all hours of the day onto the site and into the building which makes it very easy for anyone to simply gain access into the building. The two perimeter gates on the property are kept wide open to allow easy entry/exit for transit fleet. Better fencing and door/gate access controls could provide a higher level of site security without compromising fleet operations.

2. CCTV Cameras - To optimize the security of the entire property, additional CCTV cameras should be added to offer a more comprehensive degree of security and safe guarding of assets.

This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.

### Project Comments/Reference

| <b>Project Description</b>   | <b>Version Description</b>   |
| To secure an alternate terminal in the City's west end that better serves the needs of our ridership. This would result in improved driver amenities and provide a more strategic location for ridership growth opportunities. An alternate location to the current terminal would provide passengers with a more accessible terminal in the vicinity of fare generators, along with improved customer amenities.<br><br>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. \$100,000 of the associated costs are matched with 50% Federal funding. | The original scope of work was based on the PTIF grant application and a specific site which required minimal construction. That site is no longer available. Subsequently, an alternative site was selected which resulted in a revised scope of work. During the 2018 Capital budget, Council approved \$548,000 as a placeholder within the 6 year plan. Following the 2018 Capital budget, the full scope of the construction works were developed. The additional cost can be attributed to an expanded scope, soil conditions and resulting pavement design. The estimated additional funding required to complete this project is \$880,000. This does not include a budget for financing costs. If funding is not issued in 2019, financing costs will need to be added to the budget. |

| <b>Project Description</b>  |                      |                                  |                  | <b>Version Description</b>  |                             |             |             |                             |             |             |             |                  |                   |  |
| <p>Since the construction of the facility in 1979, the transportation area and central dispatch at the main transit terminal have expanded to support new technologies, including the Intelligent Transportation System. These new technology improvements facilitate the need to enhance existing facilities to ensure effective communication to on street service. Improvements in communication allow for better functionality with bus drivers and customers through real time information.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> |                      |                                  |                  |   |                             |             |             |                             |             |             |             |                  |                   |  |

| <b>Project Description</b>  |                      |                                    |                  | <b>Version Description</b>   |  |             |             |             |                             |             |             |                  |                   |  |
| The purchase of up to 152 bus shelters equipped with solar lighting and solar advertising panels, along with refurbishing of up to 41 existing bus shelters, will assist in providing enhanced customer amenities. External benefits would increase our shelter coverage from 13% to 20% within our service area. |                      |                                    |                  | An update to this project identified that 115 new shelters will be installed during 2018, with 60 old shelters being replaced from the 115 new installations.  |  |             |             |             |                             |             |             |                  |                   |  |
| This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.   |                      |                                    |                  |  |  |             |             |             |                             |             |             |                  |                   |  |

| <p>In recent years, Transit Windsor has focused on expanding transit customer service to provide a full range of fare products. As a result, there is limited parking space to facilitate these initiatives. Providing additional parking will improve the customer experience through convenience and efficiency.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> |                      |                                    |                  |  |                             |             |             |                             |             |             |             |                  |                   |              |  |

| <p>Since the construction of the facility in 1979, the customer service area at the main transit terminal has expanded its services to the public. This project includes reconfiguring the accessible entrance and customer service counter area to reflect current business practices and needs. The proposed renovations would enhance the security of the area to ensure safety for employees and customers.</p> <p>This project was approved for PTIF Phase 1 funding announced on March 31, 2017. The associated costs are precommitted and matched with 50% Federal funding.</p> |                             |                                    |  |          |          |          |                             |          |               |  |  |  |                |             |           |            |         |                             |      |      |       |       |                 |  |  |  |  |  |  |  |  |  |  |                                   |  |  |  |  |  |  |  |  |  |  |        |   |   |   |   |   |   |   |        |              |               |          |          |          |          |          |          |          |               |                 |  |  |  |  |  |  |  |  |  |  |                                     |  |  |  |  |  |  |  |  |  |  |        |   |   |   |   |   |   |   |        |              |               |          |          |          |          |          |          |          |               |

| <b>Project Description</b>  | <b>Version Description</b>  |
| <p>Windsor Fire &amp; Rescue is recommending funding for the purchase of Water Rescue Equipment. Within the city of Windsor there is 43.7 kilometers of shoreline of the Detroit River, 12.4 kilometers of shoreline of the Little River, and 8.8 kilometers of the Grand Marais Drain. Additional risks include 50 + acres made up of 6 major bodies of water including Southwood lakes and Blue Heron to name a few. Windsor Fire &amp; Rescue team currently provides minimal land based water rescue. No firefighter shall be within 3 feet of any shoreline. In a water emergency, firefighter is limited to a throw bag with 75ft of rope and a throw Buoy (75ft) on every Fire Truck. No Ice rescue is provided if distress happens to be during the winter months.</p> <p>The enhancement of this service would include water entry and ice rescue on the inland bodies of water. While the training is similar, extending this service to include response on the Detroit River would require the purchase of, or at least access to a watercraft suitable for rescue operations on the Detroit river.</p> | <p>One-time funding for the equipment required is detailed below. Department is recommending that \$100,000 be allocated to allow this important service delivery be enhanced.</p> <p>Ice Rescue/Flotation kit<br/>         Personal Water Craft (including a trailer)<br/>         Water Suits<br/>         Miscellaneous hand tools and equipment</p> |

| <b>Project Comments/Reference</b>  | <b>Version Comments</b> |
| Windsor Fire & Rescue 2018-2023 Strategic plan, revealed that external community stakeholders expressed an area of concern that may be a weakness within current delivery system. In priority order #7 on the list, was lack of water and ice rescue service given the proximity to waterways. |                         |

| <b>Project Description</b>  |                      |                                  |                  | <b>Version Description</b>   |             |             |             |             |                             |             |             |              |              |  |
| Fire & Rescue Training division requires two new forcible entry props. It is used to practice the skill of entering a locked structure in an emergency situation. Training is often brought to different fire hall stations to allow for firefighters' readiness to respond if an emergency call comes in. The new forcible entry prop has the functionality to be taken apart and make it more portable to facilitate training in different locations. The current prop has reached its useful life and its old design makes it difficult to move locations. Estimated cost for two props is \$20,000. |                      |                                  |                  | Delayed funding would limit availability and compromise efficiency of forcible entry training. |             |             |             |             |                             |             |             |              |              |  |

|----------------------------|--|----------------------------|--|
| <b>Project Description</b> | <p>Fire is recommending the replacement of the existing Station 1/Headquarters facility. The current building was built in 1967 and is in poor condition. The building is in need of substantial repairs which may be very costly and only serve as stopgap measures. The new facility would also house the Fire Prevention division which is currently working out of an aging annex building located to the rear of the current headquarters.</p> <p>The current headquarters building provides only very limited access to persons with physical disabilities. Accessibility is limited to the first floor Administration area only. The Administrative area of the headquarters building also has inadequate office and storage space. Personnel are forced to share workspace with limited storage capability. A central record keeping area does not exist within the facility, which creates difficulty in ensuring records are kept and maintained according to best practices.</p> <p>Due to the age of the building, the energy efficiency is virtually non-existent. Both the building construction and outdated mechanicals contribute to the inefficiency of the structure. It is not uncommon for repairs to the air conditioning system to take days.</p> | <b>Version Description</b> | <p>The fire station section of the headquarters building is in extreme disrepair. The building is crumbling around the windows and has experienced numerous problems with the air handling equipment and plumbing. Flooding is experienced during major rain falls. Repairs often take days to complete due to aging equipment and the difficulty in finding parts.</p> <p>Relative to the current Fire Prevention building, only the front vestibule can accommodate persons with disabilities. The corridors, door widths and offices cannot accommodate a person in a wheel chair. Fire Prevention staff are currently working out of renovated closets with little room for more than a desk and chair. The Fire Prevention annex faces the same challenges with energy efficiency and general disrepair.</p> <p>A new facility will house Administration, Fire Prevention and Station 1 operations. The new facility will provide an accessible, energy efficient facility that meets the current and future needs of Windsor Fire and Rescue Services.</p> |

|                                   |   |                         |  |
|-----------------------------------|---|-------------------------|--|
| <b>Project Comments/Reference</b> | A business case is being worked on for this initiative to consider the cost of rehabilitating the current site versus the cost of a new site. The funding allocated in the capital budget is to allow for the purchase of land should there be such a need, understanding a report to Council would be required prior to taking any action. | <b>Version Comments</b> | Funds have been identified as SEED funding toward a new facility or continued repairs/rehabilitation to the existing facility. Fire & Rescue is recommending the replacement funding be put in place in years 2024 & 2025. |

**Project Description**

Fire & Rescue Training division is requesting funding to upgrade and expand current training facility at 2885 Kew Drive to better meet it's operational needs. Training division puts on classes for new firefighter recruits, existing firefighters and other fire staff. Classes include a wide variety of Fire & Rescue specific training (medical, auto x, forcible entry, etc.) Training division also carries out promotional processes such as captain and district chief classes. Teaching tools used today are mainly laptops, audio visual equipment and hands-on props.

Recent changes to the Fire Protection and Prevention Act have made certification for firefighters and officers mandatory. The new legislation is being phased in over a 2 year period beginning July 1, 2019. The addition of these requirements puts additional strain on the training division, It is not feasible to send staff to the Ontario Fire College for training and testing, The current WFRS training facility does not meet the current training needs of the service and is certainly not capable of absorbing the long term training demand brought on by the recent regulatory changes. In order to provide staff with an appropriate learning environment, the addition of classroom space that supports new learning technologies such as a computer lab, with large screens and smart technology is essential.

**Version Description**

One of the main challenges with the facility is space and set-up. There is one small classroom, which is an open and shared space with Apparatus division. The classroom is not configured to support any new learning technologies. The addition of 2 classrooms will accommodate in -service training and can be run concurrently with specific classes such as recruit, officer, and specialty program training. Current Chief trainer's office does not allow for lesson planning and privacy, which the 2nd classroom can facilitate as well. Current washroom location adds to the disturbance of the classroom, and lunchroom is used as meeting space. Furthermore, female washroom is a converted closet. Both washroom needs will be re-assessed and configured into the addition/ renovation of the training space within the building.

2885 Kew Drive property is owned by The City of Windsor. An addition is recommended on the land available at the front of the current building. Additional space would establish appropriate classroom size and re-organization of the entire training department to meet today's needs of a teaching classroom.

**Project Comments/Reference**

Windsor Fire & Rescue Services (WFRS) 2018 - 2023 Strategic plan identified the need to evaluate and enhance current training practices, facilities and equipment. This project plays a critical role in ability to accomplish this task in order to pursue, achieve and maintain accreditation with the CFAI (Commission on Fire Accreditation International) to better serve our community and to embrace excellence.

**Version Comments**

Delay in funding would deepen the strain on resources in Training and Apparatus divisions as well as pro-long the accreditation process with the CFAI.

| <b>Project Description</b>  |                      |                                  |                  | <b>Version Description</b>  |             |             |             |             |                             |             |             |              |              |  |
| A Thermal Imaging Camera or Thermal Imager is a non-contact device that detects infrared energy (heat) and converts it into an electronic signal, which is then processed to produce a thermal image or video on a display screen. The image created is based on the contrast of infrared radiation energy that exists between objects that are of different temperatures. The amount of infrared radiation emitted by an object increases with temperature; as a result, cooler objects appear on the display screen darker than warmer objects. Firefighters use thermal imagers to see through smoke, to find persons, and to locate the base of a fire in environments with or without visible light. Simply put, the thermal imager allows the firefighter to see in the dark making it easier to find trapped persons while at the same time creating a safer environment for the firefighter to work in. |                      |                                  |                  | WFRS currently owns 18 Thermal Imagers which are assigned to each fire apparatus as well as the Safety Officer's response vehicle. Thermal imagers are used in hostile environments and are subject to physical conditions which over time can result in damage to the unit despite their robust design. This, along with constantly evolving technology results in the units having to be replaced regularly.<br><br>At an average cost approaching \$10,000/unit and a life span of 5 years per unit, WFRS is seeking \$50,000 (5 units/year) to begin a regular replacement schedule which would ensure reliable equipment is available on a continuous basis and allow for better control and planning of the replacements. |             |             |             |             |                             |             |             |              |              |  |

| <b>Project Description</b>  |                      |                                  |                  | <b>Version Description</b>   |   |             |             |             |                             |             |             |                  |                   |  |
| Current traffic pre-emption technology in use at the City (Opticom) is not installed throughout the city and existing units require extensive adjustments and maintenance. GPS traffic pre-emption technology will allow for the control of all traffic signals throughout the City through connections via the traffic services ATMS and utilizes GPS technology to identify vehicle locations, vehicle speed and potentially can monitor vehicle operations (e.g. brakes, engine temperature, etc.). Installation of this technology has the potential to reduce response times by as much as 30 seconds on short distance responses and as much as one minute on longer distance responses. This technology could put responders on scene sooner and in greater numbers, and will support the corporate vision of employee safety and public safety. |                      |                                  |                  | This technology would be a cost aversion strategy as the need for additional infrastructure - and thereby capital dollars - may be reduced as the reach of existing fire services is extended. Further, this system - once operational - could be expanded to include other agencies such as Transit, Police and EMS, all of which could leverage this investment.<br><br>Total projected costs for the GPS traffic pre-emption system including installation are approximately \$2,540,000 and include:<br>-Controllers & Communications Network<br>-ATMS System Development and Integration Costs<br>-Antenna and Equipment Install on Each Fire Apparatus |   |             |             |             |                             |             |             |                  |                   |  |

| <b>Project Description</b>  |                      |                                  | <b>Version Description</b>   |   |             |             |               |                             |             |             |             |              |               |
| Radio Service Monitor is used to diagnose and repair as well as tune 1,500 corporate radio units across entire City of Windsor operations. This includes departments such as parks, public works, environmental services, police and tunnel services. Radio Service Monitor is also used at radio sites to measure interference, de-sense, site noise levels, and many more diagnostics to prevent service issues and determine course of action when service is compromised. |                      |                                  | Current Radio Service Monitor was purchased in 1995 and although it still meets our day to day needs, a 22 year old unit has reached it's useful life. When failure occurs repairs are more difficult and inefficient to do due to unavailability of parts. As a result, replacement will become the best option in the near future to meet new technology in the market today. A placeholder for a replacement is warranted and Fire Communications department is recommending \$45,000 be allocated toward this project. |   |             |             |               |                             |             |             |             |              |               |

| <p>The current Crisys Computer Aided Dispatch (CAD) system was implemented in 2004. This CAD system is one of the major components of the Windsor Fire Communications as it provides speed and accuracy on processing emergency calls for the City of Windsor. Additional important features include vital information for firefighting and rescue operations such as location and the type of hazardous materials, location of physically challenged citizens, location and size of hydrants, special warnings, fire pre-planning information, etc.</p> <p>The City of Windsor also sells this service to other municipalities to be in a position of dispatching other municipalities.</p> |                      |   |                  | <p>Crisys recommends complete system replacement every 3 years as computer processor manufacturers typically are doubling the speed of these devices every 18 months. In order to ensure the reliability of the supporting equipment, a full replacement of the system, including workstations that can accommodate the upgraded system, was done in 2010. The 2013 &amp; 2016 upgrade involved computer hardware components only, and the manufacturer indicated that approximately \$50,000 will be required every 3-years going forward. Last upgrade was completed in early 2017 therefore, next replacement is due in the year 2020.</p> |                             |               |             |             |                             |             |             |                  |                   |  |

| <b>Project Description</b>   |                      |                                  |                  | <b>Version Description</b>   |                             |             |               |                             |             |             |             |                  |                   |  |
| <p>The Fire Apparatus Division is requesting funding to purchase portable hoists capable of lifting large fire rescue vehicles. Currently the department has a two permanent hoist capable of lifting these vehicles. The purchase of portable hoists would increase the efficiency of the division by affording staff the ability to complete major repairs to vehicles when the two large hoists are occupied, rather than having to wait for one vehicle repair to be finished before another one could begin.</p> <p>In some cases a repair may be completed while working under the vehicle, the technician is required to lie on his back using a creeper which is both less productive and less safe than operating while standing. The use of portable hoists gives us the ability to use our flat bay and the concrete pad outside to perform operations such as power washing the undercarriage and inspections and other emergency repairs without interrupting operations on the other two hoists.</p> |                      |                                  |                  | <p>Portable hoists would provide a level of flexibility that currently does not exist within the division. It is expected that the addition of this equipment would increase the overall safety and efficiency of the division and reduce the amount of time vehicles are out of service awaiting repairs.</p> <p>Windsor Fire &amp; Rescue Services is recommending the purchase of four portable hoists in 2021, at an estimated cost of \$20,000 each. This cost would provide some savings in Operating budget when rental of portable hoists is required.</p> |                             |             |               |                             |             |             |             |                  |                   |  |

|----------------------------|--|
| <b>Project Description</b> | Quality breathing air maintained to CSA standards is the backbone of the fire department. Self-contained breathing apparatus (SCBA) is the primary piece of personal protection equipment (PPE) used for firefighting, allowing firefighters to enter hazardous atmospheres with respiratory protection. This piece of equipment is useless without being fully charged with breathing air of the highest standards. This compressor allows for the filling of SCBAs cylinders at a rate that will keep up to any major conflagration requirements. Also, this is not just a breathing air compressor; the system entails a fill station which would contain any flying debris separating from a damaged cylinder if it were to erupt. The current fill station is a directional containment unit allowing the exploded cylinder to go up and down directing the explosion away from the operator. All new fill stations contain all cylinder fragments in the unit making it much safer if the cylinder were to fail. |
| <b>Version Description</b> | The current breathing air compressor was installed new in 1988. With regular maintenance the current compressor has operated well for 30 years with a few substantial repairs. The breathing air cooler and forth stage piston have been replaced several times. The condensate collector cylinder has also been replaced due to age. Assorted other minor repairs including countless panel valve replacements and other mechanical repairs to the fill station have been performed, these repairs are required more frequently as time passes. As repairs are more frequent, operations are affected. This causes the Emergency Service vehicle (ESU) to make a daily run to fill the mass breathing air storage system on the aerial apparatus, taking the ESU out of service during that time.   |

|                                   |  |
|-----------------------------------|--|
| <b>Project Comments/Reference</b> | Without this breathing air compressor the ability to manage a major conflagration would be deeply compromised. A consistent supply a breathing air is the only way to ensure that a fire fight is not interrupted and that our personnel are continually protected during operations. Although it is one of two compressors in the city it is often the only one available when regular maintenance is needed or unforeseen breakdowns occur to the mobile compressor and fill station. The constant supply of breathing air to the SCBA repair room is also required to perform repairs and certifications.   |
| <b>Version Comments</b>           | The replacement of the old system is required in the near future. Windsor Fire & Rescue is recommending the replacement be at the latest in 2022. The lack of quality breathing air at the apparatus division would quickly put SCBAs out of service and consequently put our firefighting ability at risk. This compressor also fills many of the SCBA bottles from other departments including the water treatment plants, Enwin and Windsor Police. The lack of breathing air would put these departments at risk. Finally, the apparatus division repairs SCBAs for external customers, the lack of air would put a halt in this revenue stream. |

| Funding is requested to purchase replacement and new public education display materials and equipment to support the increasing number of public education-related activities undertaken by the Windsor Fire & Rescue Fire Services' Fire Prevention and Emergency Management Divisions. The current materials being utilized for Fire Prevention public education are approximately 10 years old or more in some cases and are worn, inoperable and unprofessional in appearance. Further, the single set of Fire Prevention materials is insufficient to meet the current needs of Windsor Fire & Rescue as there are often two events occurring simultaneously. |                      |                                  |                  | Windsor Fire and Rescue Services is aware of the expectation to promote the City of Windsor in a competent and professional manner. Utilizing damaged and worn displays has a negative impact on this expectation and the current materials and equipment do not reflect the new corporate visual identity standard. |  |                             |             |             |                             |             |             |                  |              |                   |  |

| A piece of apparatus that allows respirators to be flow tested annually and after repairs as per manufacture specifications and recommendations. The Posichek is approximately 18 years old with life expectancy of 20 years. This machine tests and documents airflows and system pressures, while checking for leaks, restrictions, and activation pressures. The new breathing apparatus with communications between the SCBA's control module and the heads up display in the mask requires testing and documentation of this function, this is performed by this machine. All other functions of the SCBA like alarm setting and activations are inspected and tested and documented also. The Posichek machine undergoes annual certification as required by the manufacturer and NFPA. |                      |                                  |                  | If this unit fails pro-longed service interruptions can be expected, SCBAs would have to be taken out of service or shipped to a factory repair facility like Toronto or Pittsburgh. The shipping time for SCBAs being repaired would dramatically increase the out of service time for the apparatus. Windsor Fire & Rescue Services has a very limited quantity of breathing apparatus, a loss of even 2 to 3 units at certain times of the year could cause significant operational issues. Any repair affecting the integrity of the SCBAs requires a full system flow test before the unit can be placed back in-service. These repairs although minor are frequent requiring a flow test on the machine to place these units back in service. A simple O-ring replacement can be done in-house in little more than an hour including testing, this same repair when requiring shipping could take up to a week and incur shipping charges making it a very costly task. It is becoming more difficult to maintain the machine due to outdated circuit boards and software as electronics have changed significantly over the years, just like a computer after three or four upgrades, further advancements will not be advisable. |                                 |             |             |             |                             |             |             |             |              |              |
| <b>Project Comments/Reference</b>   |                      |                                  |                  | <b>Version Comments</b>  |                                 |             |             |             |                             |             |             |             |              |              |
|   |                      |                                  |                  | Timely replacement of the Posichek machine would avoid a long interruption of repair services for breathing apparatus. A reliable SCBA testing machine designed to test the new generations of SCBAs ensures the continued and uninterrupted supply of certified respirators necessary for firefighting.   |                                 |             |             |             |                             |             |             |             |              |              |

| <b>Project Description</b>  |                      |                                  |                  | <b>Version Description</b>   |                                 |             |             |             |                             |             |             |              |              |  |
| Effective communications is the most critical aspect of public safety. This consists of communications with the public, communications with the firefighters, Windsor Fire and Rescue staff and other emergency services. Emergency communications is about to enter a significant and sustained period of transformation which will be legislated in year 2023. This will include a move to Next Generation 911 (NG911) and the implementation of the North American public safety broadband spectrum. Replacement of the aging telephone system at WFRS headquarters will be required in order to accommodate the new technology. |                      |                                  |                  | Telecommunication upgrade is a Federal initiative which will become legislated in the Year 2023. Exact funding requirement is unknown but is estimated to be significant, hence it is important to plan for this project funding in order to meet the legislation without major financial impact in one year. As this initiative progresses more details will become available and management will advise and report on any changes or new information that have the potential to affect the cost or operations related to this project. |                                 |             |             |             |                             |             |             |              |              |  |

| <b>Project Description</b>   |                      |                                  |                  | <b>Version Description</b>  |  |             |             |             |                             |             |             |             |              |              |
| The Fire & Rescue Apparatus Division provides maintenance and repair services to its entire fleet and to all of its small equipment including breathing apparatus and auto extrication tools. The maintenance of the equipment becomes increasingly more reliant on air powered tools. A consistent supply of compressed air is required to operate these tools in the process of inspections and repairs. The functions these tools provide cannot be practically done in any other matter as manually operated or electric tools cannot provide the torque that air tools deliver. |                      |                                  |                  | The Shop Air-Compressor is approximately 16 years old with life expectancy of 20 years. This equipment is essential in daily operations of any shop today. It is used to power all air tools like air impact guns, air chisels, shop fluid dispensing system and an assortment of smaller tools essential to the operation of the Apparatus Division. The shop air is even necessary to operate the large truck hoist.  |  |             |             |             |                             |             |             |             |              |              |
| <b>Project Comments/Reference</b>  |                      |                                  |                  | <b>Version Comments</b>   |  |             |             |             |                             |             |             |             |              |              |
|  |                      |                                  |                  | Timely replacement of the Shop air compressor allows for the continuing operation of the apparatus division. All mechanical equipment has a finite lifespan. Extending this unit passed 20 years is not recommended as cost involved for unplanned interruption in service is not economical. New screw compressors are a quieter running unit much closer to the 80 dB range as required by the city standard and much more efficient than the old piston style which is currently in service. |  |             |             |             |                             |             |             |             |              |              |

| <b>Project Description</b>  |                      |                                  |                  | <b>Version Description</b>  |             |             |             |             |                             |             |             |              |              |  |
| Fire & Rescue Apparatus Division is requesting funding to replace heavy hydraulic hoist capable of lifting large fire vehicles. Currently, Apparatus division operates with two heavy hydraulic hoists one of which allows for lifting capacity of 80,000 lbs. The second hoist, requiring replacement, is a smaller hoist that has total lifting capacity of 50,000 lbs. This one was originally installed in 1974 and is past its useful life. This smaller hoist is normally used for fire truck vehicles such as pumpers and rescue's but also for special operation vehicles such as hazmat and command units. |                      |                                  |                  | The maintenance of this hoist has become extensive and is reaching the point of being non-serviceable due to cylinder scoring and pitting. Rusting of certain panels has made it necessary to cut them out to allow the hoists post to move up and down. Parts are not readily available or have been discontinued requiring fabrication and extra costs to repair. This is creating gaps in service when the hoist is down until parts are found or made. The new hoist today has many added functionalities. For example, a new hoist has multi safety locking elevations creating a more ergonomic friendly position for the mechanic, while the old hoist has one safety lock at its fully extended position. Also the head of the old hoist, the section which makes contact with the truck cannot be adjusted to lift some of our units safely. |             |             |             |             |                             |             |             |              |              |  |
| <b>Project Comments/Reference</b>   |                      |                                  |                  | <b>Version Comments</b>   |             |             |             |             |                             |             |             |              |              |  |
|   |                      |                                  |                  | Timely replacement of the hoist would facilitate safer and quicker lifting of our units for maintenance and inspection. As stated earlier, this hoist is very quickly becoming unserviceable.   |             |             |             |             |                             |             |             |              |              |  |

**Project Description**  
 WFRS is seeking one time funding for the development of a strategic plan. In 2017 Windsor Fire & Rescue Services registered with the Center for Public Safety Excellence (CPSE) as the first step in seeking accreditation. CPSE is an accreditation body for the North American Fire Service. The process involves a self-assessment and peer review that culminates in a presentation to the CPSE board that awards accreditation. All business streams and services provided by a fire service are reviewed by CPSE. An accredited department is deemed to be one that is well managed and operates in accordance to the best practices of the fire service based on the communities' own identity. A strategic plan is required for accreditation. WFRS' current strategic plan ends in 2017. This plan was developed internally and required substantial internal resources to accomplish. Furthermore the plan did not significantly involve external stakeholders.

**Version Description**  
 CPSE is able to develop a custom strategic plan for WFRS that would not only consider input from internal stakeholders but external as well. Additionally the amount of departmental resources required to develop an exhaustive plan internally would not be required. The potential benefits of utilizing CPSE are timely delivery and increased credibility of the product as it will have been developed by a third party with the consideration of all stakeholders. The risk of developing a strategic plan internally is associated with the demand on internal resources. It is likely the project would take longer to complete and staff would be required to reprioritize their work potentially causing the delay of other departmental initiatives and ongoing projects.

**Version Comments**  
 CPSE has completed Windsor Fire and Rescue's custom strategic plan in 2018, project is to remain open until funding is received in 2022.  
 PRE-COMMITMENT:  
 As per CR3/2018, Report C 238/2017, Council approved a pre-commitment of \$30,000 in 2022.

| <b>Project Description</b>   |                      |                                  |                  | <b>Version Description</b>   |  |                            |             |                             |             |             |             |             |                  |                   |
| The building at 3557 Melbourne is the former Marlborough Community Centre, which was constructed in 1968. It is attached to Marlborough School. The GECD SB leased the building from September 1, 2002 – August 31, 2007. The building has been vacant since September 1, 2007. The WECDSB has expressed no interest in acquiring the property, and the City has identified no current municipal use. It is recommended that the building be demolished as there are limited operating funds to maintain the building. The building is not in move in condition. In the event that the building was to be occupied again, a building condition analysis would have to be prepared in order to determine what repairs would be necessary. |                      |                                  |                  | The Real Estate Division will be preparing a report for Council's consideration recommending the demolition of the former Marlborough Community Centre. An estimated demolition cost of \$60,000 is being sought as a placeholder until such report is presented to Council. |  |                            |             |                             |             |             |             |             |                  |                   |

| <b>Project Description</b>   |                      |                                  |                  | <b>Version Description</b>  |  |                            |             |                             |             |             |             |                  |              |                   |
| Part of the Transitional Buildings portfolio includes properties that have been vested to the City that had not sold at the various property tax sales. Some of these properties are unfit to occupy or in such a poor state that the cost to repair would exceed the market value of the property as improved. There are several properties eligible for vesting in 2017, 2018 and 2019 that likely will need to be demolished. |                      |                                  |                  | The Real Estate Division will be bringing forward reports for the demolition of various transitional properties currently under the Transitional Buildings portfolio and those properties that are proposed to be vested in 2017 and 2018 that need to be demolished. A placeholder of \$100,000 per year for 2017, 2018 and 2019 is being requested but cannot be accommodated due to limited funding. Administration may propose to fund the demolition costs from the eventual sale of those properties. |  |                            |             |                             |             |             |             |                  |              |                   |

| Funding will be required to conduct the next review of the city's Official Plan. The review is a requirement of the Ontario Planning Act and provides the opportunity for a comprehensive updating of the plans policies and schedules. The review is prescribed to ensure consistency with the Provincial Policy Statement and to also recognize local economic conditions and land use requirements. |                      |                                  |                  | Official Plan Review             |                              |             |             |             |                             |             |             |                |                |  |

| <b>Project Description</b>   |                      |                                  |                     | <b>Version Description</b>   |                                 |             |                             |             |             |             |             |                  |                   |  |
| Cost of preparing a reference plan for an area identified on airport lands and required studies under the Provincial Investment Ready: Certified Sites Program. The Program is a province-wide investment attraction program, the purpose of which is to promote an inventory of sites that meet a set of minimum requirements. 50% of the costs associated with preparing the required material are eligible for reimbursement from the Province up to a maximum of \$25,000. The Airport has agreed to fund 50% of the cost from the Commercial Feasibility capital project id 7091022) subject to the Airport's Board approval. |                      |                                  |                     | In the event that the City adds the area east of the Cargo Hub as a second certified site, enlarges the current proposed certified site west of the Cargo Hub or adds the area along County Rd. 42 , then more funds would be required. It is estimated that an additional \$50,000 would be adequate. |                                 |             |                             |             |             |             |             |                  |                   |  |

| The Official Plan provides guidance for the physical development of the City of Windsor over a 20-year period. The policies of the plan are intended to ensure that efficient land use and development patterns support sustainability by promoting strong, liveable, healthy and resilient communities, protecting the environment and public health and safety, and facilitating economic growth. Under the provisions of the Planning Act, official plans are required to be reviewed at least once every ten years. This review ensures the plan remains relevant to the changing circumstances within Windsor and to current provincial legislation and policy. It is proposed that this review will be consultant led. |                      |                                  |                  | Comprehensive Zoning By-Law         |  |             |             |             |                             |             |             |             |              |              |

| As part of implementing the Green Windsor strategy of the Environmental Master Plan and Official Plan, City Planning staff will develop with regional partners a strategy to assemble green system components. The project will focus on the creation of a connected linear park system in adherence with the 2016 Parks Master Plan to meet rising public demand for healthy recreational opportunities while offering the added benefit of increasing property assessment values.. Further more, these linear parks can incorporate new storm water management facilities and active transportation opportunities that together may reduce the negative impacts of climate change and also help to alleviate basement flooding. Cost sharing with regional partners will be required. |                      |                                    |                  | As part of implementing the Green Windsor strategy of the Environmental Master Plan and Official Plan, City Planning staff will develop with regional partners a strategy to assemble green system components. The project will focus on the creation of a connected linear park system in adherence with the 2016 Parks Master Plan to meet rising public demand for healthy recreational opportunities while offering the added benefit of increasing property assessment values. Furthermore, these linear parks can incorporate new storm water management facilities and active transportation opportunities that together may reduce the negative impacts of climate change and also help to alleviate basement flooding. Cost sharing with regional partners and senior levels of government will be utilized.<br><br>Project is being deferred until 2019+. |                                 |             |             |             |                             |             |             |             |                  |                   |

| Planning staff will work with a consultant in the preparation of a study that analyzes best practices/opportunities/implications and recommends how the City can best assist the owners of properties designated under the Ontario Heritage Act to preserve them, followed by a forecast for funding any incentives approved by City Council. The study will also evaluate options regarding the reuse of vacant and/or underutilized heritage properties' |                      |                                  |                  | 2021: Recommend implementation of incentives to support tax rebates for heritage properties. |  |                            |             |             |                             |             |             |             |                  |                   |

| The City's traditional annual budget allocation for the 9 BIAs has been for cost-sharing ad-hoc beautification initiatives. Disbursements from this project now are mainly for new Capital Asset requests from BIAs. This project also supports annual programs previously approved by Council. |                      |                                  |                     | To ensure support of local development in all 9 BIA's.  |                                 |             |                             |             |             |             |             |                  |                   |  |  |  |  |  |  |  |  |

| <b>Project Description</b>  |                      |                                  |                     | <b>Version Description</b>   |  |             |             |             |             |             |             |                  |                   |  |
| The cost to implement the School Neighbourhood Policy varies on a location basis. Locations requiring school zone signage with controllable flashing signs are estimated to cost approximately \$15,000 per street location. Other standard signage is less costly to install and maintain. |                      |                                  |                     | In October of 2016, Council adopted the School Neighbourhood Policy, CR645/2016. Based on a high-level estimate, bringing all of the school locations into compliance with the policy will cost approximately \$1.8 million. Implementation of policy recommendations at existing locations will be undertaken on a priority basis as funding and resources allow. |  |             |             |             |             |             |             |                  |                   |  |

| This project would cover the materials and construction of new pedestrian crossovers (PXO). PXO's are defined in the Ministry of Transportation Ontario OTM Book 15; they currently include multiple types of treatment options that can be installed depending on traffic and geometric characteristics of the site. PXO's may require anything from signs with crossing markings, flashing beacons, or fully signalized pedestrian signals. Costs range from \$25,000 to \$85,000 depending on the treatment required. |                      |                                    |                  |                                  |  |             |             |             |                             |             |             |              |                  |                   |

| As per the 2014 Enhanced Capital Plan, Council approved in principle funds from the 2018 Debt Reduction Levy for an environmental assessment that will be undertaken to create an attractive complete streets corridor by identifying the preferred alternative to reallocate any identified surplus vehicle capacity and optimize the design of the right-of-way. Implementation will be initiated with the balance of the funding. |                      |                                  |                     | As per CR89/2014, Report #17088, Council approved the University Avenue project from Huron Church Road to McDougall Street as part of the 2013 enhanced capital budget to be funded in 2018.                        |  |             |                             |             |             |             |             |                  |                   |  |  |  |  |  |  |  |  |

### Project Description

Ongoing allocation to provide funds for Environmental Study Reports (ESR) as approved by CR148/2001.

The list of upcoming ESRs (alpha order) are:

- Central (Tesumseh to E.C. Row Expressway)
- E.C. Row Expressway
- Jefferson (Rose to to Airport Lands)
- Lauzon Road (Tecumseh Road East to Forest Glade Drive)
- Ojibway Parkway (MTO Jurisdiction to Morton Drive)
- Transportation Master Plan
- Truck Route Study
- Wyandotte Street East Extension (Jarvis to Banwell)

### Project Comments/Reference

7086010

### Version Description

ESRs typically extend beyond one year in duration (range from \$70,000 - \$500,000 per study). The proposed annual budget is insufficient to tackle a single typical ESR in one year and budgets are accumulated in order to initiate a project.

**Project Description**  
 Various locations for bike facility development as approved by B.U.M.P. and CR554/2001. This funding is dedicated to implementing the 4 main components: Cycling Network Development, Cycling Awareness and Education, Cycling-Transit Links and End-of-trip Facilities.  
 CR627/2016 & CR628/2016 confirmed the project list for enhanced funding received to date.  
 Note: Implementation of cycling facilities will depend on schedule of road reconstruction and resurfacing projects.

**Version Description**  
 Increased capital budgets since 2011 are essential to ensuring cycling facilities are constructed in capital projects by other divisions and to access grant funding (those requiring municipal contribution) as it becomes available.

**Version Comments**  
 2013 & 2014 Enhanced Capital Budget, the Windsor Loop funds have allocated approximately \$6.800,000 to add bike lanes and sidewalks. \$2,059,000 of the \$6,800,000 allotted enhanced capital was reallocated to the Dougall Road / CN Rail overpass project, #7161061.  
  
 As per B59/2019, Council approved funding of \$600,000 in 2019 for the Investing in Canada Plan - Public Transit grant.

| General ongoing allocation of funds for Traffic Calming initiatives per the Traffic Calming Policy (CR537/2005). On September 21, 2015, Council approved the revised Traffic Calming Policy (M394-2015). Ongoing Capital budget is required including processing requests through the policy process and implementation of prioritized traffic calming plans. |                      |                                    |                     | The magnitude of the prioritized traffic calming plans and available funding will dictate the implementation schedule. |   |             |             |             |             |             |             |                  |                   |         |

| On Tues. Jan. 16th, 2018, City Council approved the 2018 Enhanced Capital Budget Plan for a number of specific projects in the form of placeholder allocations subject to detailed reports to be prepared for Council's consideration. |                      |                                    |                  | Phase 1 - theme districting is intended to re-shape the public realm at key destination points in the City in order to maximize shared community values. Theme districting will pay particular attention to the physical, cultural and social identities that define a place and support its ongoing evolution. The phased project will identify the different districts within the City and provide physical improvements and theme elements that will make the area a more enjoyable place to live, work or visit thereby creating a destination environment that is inviting and authentic. Theme districting will include significant consultations with the surrounding neighbourhoods and area merchants as to capitalize on local ideas, inspirations and potential that will result in the creation of unique public realm spaces. The first phase will involve theming surrounding the Walkerville Distillery District. Public consultations were initiated in the Spring of 2018 for determination as to which elements shall be included with implementation to follow - \$1,405,000.<br><br>Phase 2 - Proceeding with further theming in the remaining districts. At this time, prioritization of theming installation for districts has not been defined. Public consultations for the next theme district will be initiated in late 2018 for determination as to which elements shall be included with implementation to follow - \$3,595,000. |             |             |             |             |                             |             |              |              |  |  |
| <b>Project Comments/Reference</b>  |                      |                                    |                  | <b>Version Comments</b>  |             |             |             |             |                             |             |              |              |  |  |

| <b>Project Description</b>  |                      |                                    |                  | <b>Version Description</b>   |  |             |             |             |                             |             |             |             |              |              |  |
| Implement an e-plan and e-permit Customer Resource Management System for plan submission, review and approval processes for Planning and Building Services. The implementation of these processes is consistent with and supports many of the recommendations contained in the Planning Business Process Review and specifically the Business Process Improvements related to improved customer service and communication which can be supported by technological change. |                      |                                    |                  | In 2018 City Council approved a contract with Evolta Canada Inc. for implementation of an e-permitting solution to coincide with the opening of the "One Stop" Service desk in the new City Hall. Implementation commenced in August 2018 to handle Site Plan Control applications and Building Permit applications, the two largest volume activity areas to benefit from the software solution. Then Planning and Building will gradually implement other types of applications received by the Department that are value added over the interim. A comprehensive solution is being delivered for e-permitting including Plan Submission, Permitting, Plan Review, Inspection, and Transaction Software. Conduct a trial (i.e. proof of concept & pilot project) of the proposed solution with the Site Plan Control staff and Building Permits staff. A pre-commitment against the funds for years 2019 to 2022 was approved. |  |             |             |             |                             |             |             |             |              |              |  |

| Funds to be used to study and implement design standards and physical features/amenities that contribute to a higher quality of life in local neighbourhoods. Past funding has been used to complete the Site Plan Review Manual, then to fund production of Riverside Drive Vista Improvement Streetscape guidelines per CR364/2009. Complementary to the Site Plan Review Manual, the preparation of development guidelines for different areas of the City began in 2015. |                      |                                    |                  | <ol style="list-style-type: none"> <li>1) Develop the Ford City CIP</li> <li>2) Prepare Design Guidelines for Infill Development</li> <li>3) Develop &amp; adopt the Site Plan Review Manual</li> <li>4) Prepare Community Improvement Plans for targeted neighbourhoods</li> <li>5) Comprehensive Sign Bylaw Review</li> <li>6) Develop &amp; adopt Design Guidelines &amp; Standards for Civic Ways &amp; Theme Streets</li> <li>7) Develop City of Windsor Urban Design Manual</li> <li>8) Prepare targeted area Design Guidelines</li> </ol> |                                 |             |             |             |                             |             |             |             |                  |                   |

**Project Description**

Funds to be used for capital investments relating to the design, implementation and construction of the Civic Square Campus area (including the Civic Square Campus, Charles Clark Square and the Civic Esplanade) consistent with the Civic Square Campus Conceptual Site Plan that was approved in principle (CR162/2014) for the purposes of providing a definable direction for the ongoing development of the Civic Square Campus and surrounding areas.

The current funds budgeted are for the post-demolition restoration and minimal enhancement (+/- 65% hardscape) of the former City Hall site to standard that is consistent and compatible with the current design and features of the surrounding Civic Square Campus. A higher standard of design, and additional amenities and features will require funding beyond the amounts currently provided.

**Version Description**

To coincide with the demolition of the old City Hall, additional capital investment is recommended to design/install/construct features in the Civic Square Campus area. The current funds budgeted are for the post-demolition restoration and minimal enhancement of the former City Hall site with additional amenities and features requiring additional funding beyond the amounts currently provided.

NOTE: Funds in the amount of \$2,522,000 (\$600,000 in 2017 currently available from PYG reserve, \$1,172,000 in 2020 and \$750,000 in 2021) formerly earmarked as a placeholder for the Riverside Pedestrian Tunnel are recommended to be redirected to the Civic Esplanade project. Future funds may still be required depending on the amenities that Council approves to be included once the consultation process has been completed.

2019 – Hire an external consultant to facilitate the consultation process, prepare a design that incorporates the desired amenities and features, and provide detailed cost estimates for the Civic Square redevelopment that is envisioned. One of the first tasks for the consultant will be to engage Council, staff and the public about the possible amenities and features of the Civic Square Campus (i.e. Civic Square, Charles Clark Square, and the Civic Esplanade), followed by a thorough vetting and costing of the desired amenities and features. The outcome of this consultant's study will include a master plan for the entire Civic Square Campus, possible construction phasing, and cost estimates that will be used for future budgetary requests.

**Version Comments**

PRE-COMMITMENT:  
CR130/2016, Report #3 approved a pre-commitment of \$187,000 in 2019. \$337,000 was approved from PYG for the New City Hall - Hydro Transformers & Secondary Distribution Switch (SDS) box removal (\$150,000 in 2016 + \$187,000 in 2019).
